

# D. P. Lube (Unit)

# Series ALD(U)600/900

- Centralized control of multi-point lubrication
- Low oil consumption volume
- Simplified oil feeding volume setting in which only the pressure differential is adjusted.
- Oil can be replenished by merely opening and closing the oil filler plug without stopping the air line.
- The condition of the generation of micromist can be checked from the oil filler port.

ALD600

ALDU600 (with panel)

### Float Switch Specifications

Voltage	200 VAC, 200 VDC
Max. cut off capacity	12 VAC, 10 W DC
Max. cut off current	0.6 A AC, 0.5 A DC
Contact point construction	1a, 1b
Level indication	Bottom limit indication

### Standard Specifications

Model name	D.P. Lube		D.P. Lube Unit <sup>(1)</sup>	
	ALD600	ALD900	ALDU600	ALDU900
Port size <sup>(2)</sup>	3/4 1	1 1/4 1 1/2 2	3/4 1	1 1/4 1 1/2 2
Fluid	Air			
Proof pressure	1.5 MPa			
Operating pressure range	0.1 to 1.0 MPa		0.15 to 1.0 MPa	
Operating pressure differential range	0.03 to 0.1 MPa			
Recommended press. differential	0.05 MPa			
Press. differential setting min. flow <sup>(3)</sup>	102 ℓ/min (ANR)			
Bowl capacity between levels (cm <sup>3</sup> )	2000	5000	2000	5000
Recommended lubricant	Turbine oil Class 1 (With no additives), ISO VG32			
Ambient and fluid temperature	5 to 60°C			
Bowl material	Epoxy resin with glass fiber, Polycarbonate			
Weight (kg)	8.9	21.3	11.1 (18.6) <sup>(4)</sup>	31.6 (48.1) <sup>(4)</sup>

- Note1) D.P. Lube unit has an attached filter at primary side of D.P. Lube.  
 Note2) Port of D.P. Lube unit is union.  
 Note3) Condition: Inlet pressure = 0.5 MPa, Pressure differential = 0.05 MPa  
 Note4) ( ) is weight with panel.

### Accessory (Option) Part No.

Description	Model	Part no.			
		ALD600	ALD900	ALDU600	ALDU900
Bracket		126130P	126044P	126130P	126044P 113449 <sup>(1)</sup> 113543 <sup>(2)</sup>
Panel		—	—	12661P	12651-1P
Float switch	S1	IS430-1	IS420-1	IS430-1	IS420-1
	S2	IS430-2	IS420-2	IS430-2	IS420-2

- Note1) Bracket for filter mounting: For Rc 1 1/4, 1 1/2 } Thread machining on filter body is needed.  
 Note2) Bracket for filter mounting: For Rc 2 }

### How to Order

**ALD 9 00 — 20 B — S1**

**Style**

ALD	D.P. Lube (Single unit)
ALDU	D.P. Lube unit

**Body size (Standard)**

6	1B
9	2B

**Thread type**

Nil	Rc
N	NPT

**Port size**

06	3/4
10	1
12	1 1/4
14	1 1/2
20	2

**Float switch**

Nil	None
S1	1b (without oil ON)
S2	1a (without oil OFF)

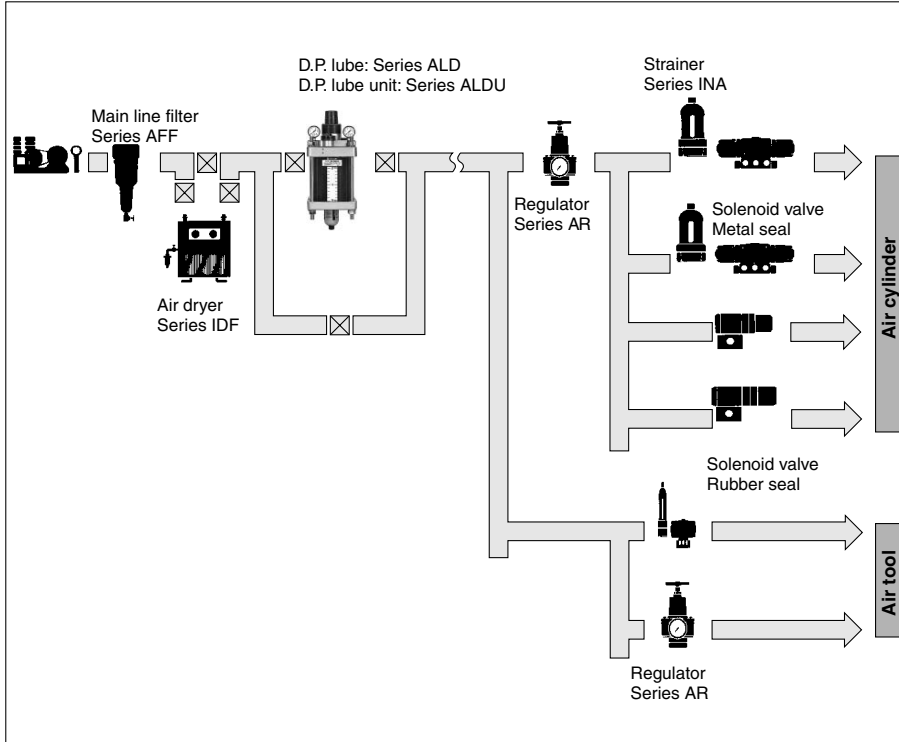

**Accessory**

Symbol	Description
Nil	—
B	Bracket
P	Panel

# Series ALD600/900

## Piping Example

## Flow Characteristics

**ALD600-10** Condition: Inlet pressure 0.5 MPa, Pressure differential setting flow 250  $\ell$ /min (ANR)

### How to read the graph (Example)

With the flow rate set to 250  $\ell$ /min (ANR) and the pressure differential set to 0.05 MPa, by changing the flow rate to 3800  $\ell$ /min (ANR) and 6000  $\ell$ /min (ANR), the pressure differential will change from the initial 0.05 MPa to 0.06 MPa, and to 0.065 MPa.

## ALD900-20

## Pressure Differential and Mist Generation

## Min. Flow for Pressure Differential Setting

### How to read the graph (Example)

When the inlet pressure is 0.5 MPa, a flow rate that is greater than 102  $\ell$ /min(ANR) will be necessary to set the pressure differential to 0.05 MPa. Below this flow rate, the pressure differential cannot be set to 0.05 MPa.

			ALD600	ALD900
③	Check valve assembly	—	12612AP	—
④	Pilot body assembly	—	—	12609AP
⑤	Bowl assembly	Glass fiber-inserted epoxy resin	126139-1A	126059-1A
⑥	Lubrication plug assembly	Zinc die-casted, NBR	126115AP	126115AP
⑦	Pressure gauge (2 pcs.)	—	GA46-10-01	GA46-10-02
⑧	Bowl assembly	—	AF11-2	AF11-2
⑨	Sealing (2 pcs.)	NBR	126140	126060
⑩	O-ring	NBR	11307	11307
⑪	Seal	NBR	—	126046
⑫	Seal	NBR	126047 (2)	126047
⑬	Check valve assembly (2 pcs.)	—	126127A	126022A
⑭	Filter element	Bronze	11294-70B	11294-70B

## ⚠ Precautions

Be sure to read before handling. Refer to pages 14-21-3 to 14-21-4 for Safety Instructions and Common Precautions.

## Caution on Design

## ⚠ Warning

1. Epoxy resin containing glass fiber and polycarbonate is used in some parts of the D.P. Lube and the D.P. Lube Unit. These units cannot be used in an environment or in a location that is exposed to synthetic oil, thinner, acetone, alcohol, organic solvents such as ethylene chloride, chemicals such as sulfuric acid or nitric acid, cutting oil, kerosene, gasoline, or a threadlock agent, etc., because they will be damaged.

## Mounting/Adjustment

## ⚠ Caution

1. Provide about 30 cm of space above and below the D.P. Lube or the D.P. Lube Unit to facilitate their maintenance and inspection.
2. When the line is stopped, do not adjust or set the differential pressure, as it could cause the differential adjustment valve to break.
3. When setting the pressure differential, if there is a fluctuation in the operating flow rate, set the pressure differential at the lower flow rate range.

## Piping

## ⚠ Warning

1. The drain pipe for the air filter in the D.P. Lube Unit must have a minimum pipe bore of  $\phi 10$ , and a maximum length of 5 m. Avoid using a riser pipe because it could cause the auto-drain to malfunction.
2. If installing an air tank, install it on the IN side of the D.P. Lube Unit. If it is installed on the OUT side, the micromist could be arrested by the air tank, which could lead to insufficient feeding of oil.

## Maintenance

## ⚠ Warning

1. Before removing the oil filler plug, loosen it two and a half turns to completely release the pressure inside the case. This will prevent the oil filler plug from flying out.

## Related Products: Strainer

At the terminal of an air pressure line in which a D.P. Lube is used, install a strainer (filtration rate of 5 μm) upstream with a metal seal solenoid valve, which is susceptible to dust.

Mounting orientation is upward.
