\* Supply pressure: 0.45 MPa.

#### Construction

# **A**Precautions

\_\_\_\_\_ Be sure to read before handling. Refer to pages 13-15-3 to 13-15-4 for Safety Instructions and Common Precautions on the products mentioned in this catalog, and refer to page 13-1-5 for Precautions on every series. 

## ▲Caution

### Mounting

Make sure that an excessive amount of load or moment is not applied to the ejector body due to pipe connections or installation.

#### Exhaust piping

On the  $ZH\square\squareB\square$  models, keep exhaust ports open on at least one side. Make sure that the back pressure of the exhaust pipe on the ZHODD models is 0.005 MPa or less. (Reference: Using tubing with an applicable diameter, its length must be 0.5 m or less.) (Port indication: P: supply port; V: vacuum port; E: exhaust port.)

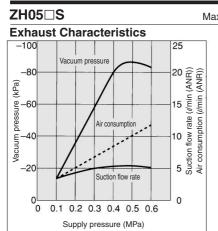

#### Matching the ejector to the vacuum circuit

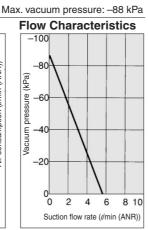

Refer to technical data on page 13-1-10 to 19 for precautions on the vacuum circuit.

### **Exhaust Characteristics/Flow Characteristics**

The flow characteristics correspond to a supply pressure of 0.45 MPa.

#### How to Read Flow Characteristics Graph

Flow characteristics are expressed in ejector vacuum pressure and suction flow. If suction flow rate changes, a change in vacuum pressure will also be expressed. Normally this relationship is expressed in ejector standard use.

In graph, Pmax is max. vacuum pressure and Qmax is max. suction flow. The valves are specified according to catalog use.

Changes in vacuum pressure are expressed in the order below.

- When ejector suction port is covered and made airtight, suction flow becomes 0 and vacuum pressure is at maximum value (Pmax).
- 2. When suction port is opened gradually, air

can flow through, (air leakage), suction flow increases, but vacuum pressure decreases. (condition P1 and Q1)

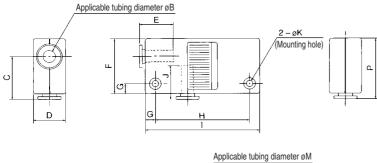

3. When suction port is opened further, suction flow moves to maximum value (Qmax), but vacuum pressure is near 0. (atmospheric pressure).

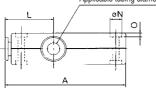

When vacuum port (vacuum piping) has no leakage, vacuum pressure becomes maximum, and vacuum pressure decreases as leakage increases. When leakage value is the same as max. suction flow, vacuum pressure is near 0.

When ventirative or leaky work must be adsorbed, please note that vacuum pressure will not be high.

Diagrams (a) to (d) show the combination with peripherals.

# possible.

### 6. Vacuum release valve

To serve as a vacuum release valve, use a 2 port or 3 port valve. As for the performance of the valve, select a valve for a low vacuum. In addition, add a needle valve that can regulate the flow volume of the vacuum releasing air. Use the atmospheric pressure or a positive pressure for the vacuum releasing pressure.
