Electric Actuator

High Performance

High Rigidity and High Precision Slider Type

Battery-less Absolute (Step Motor 24 VDC)

New

CE · UKCA · RoHS

∗ For details, refer to page 45.

Reduces cycle time

Cycle time

Reduced by **39**% (0.57 s ⟵ 0.93 s) compared with the existing model[1]
∗1 When LEKFS25GH-400 is operated from 0 to 400 mm (stroke)
Acceleration/ Deceleration

**10000** mm/s² (**334**% increase compared with the existing model)

Max. speed

1500 mm/s (Improved by **25**% compared with the existing model)

New **JXC5H/6H** Series

Speed [V]

Existing model

Time [T]

Easy operation restart after recovery of the power supply

The position information is held by the encoder even when the power supply is turned off. A return to origin operation is not necessary when the power supply is recovered.
Does not require the use of batteries.

Reduced maintenance

Batteries are not used to store the position information. Therefore, there is no need to store spare batteries or replace dead batteries.

High Performance Step Motor Controller

Higher acceleration and maximum speed can be set with the special controller (for LEKFS☐G Series).

Step Data Input Type JXC5H/6H Series `p. 31`

ACT 2 — Controller Setting Software ACT Controller 2

Easy-to-use setting software ACT Controller 2 (For PC)

Various functions available in normal mode (Compared with the existing ACT Controller)

● Parameter and step data setting

∗ Customers operating computers with specifications other than Windows 10/64 bit should use the existing ACT Controller.

● Alarm confirmation
When an alarm is generated, the alarm details and countermeasures can be confirmed.
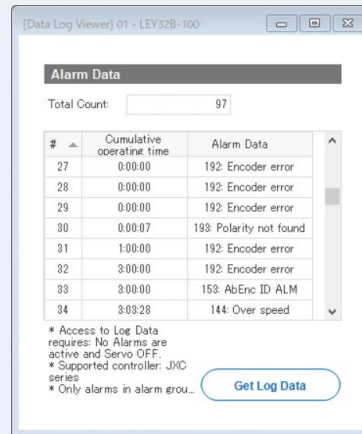

When an alarm is generated, the cumulative startup time of the controller can be confirmed.

● Waveform monitoring

The position, speed, force, and input/output signals' waveform data during operation can be measured.

∗ When using the ACT Controller 2 test operation function, waveform monitoring is not available.

SMC

Step Data Input Type JXC5H/6H *Series* `p. 31`

ACT 2 — Controller Setting Software ACT Controller 2

● The JXC-BC writing tool
The writing tool can be used to write the connected actuator's parameters and step data to a JXC series blank controller.

● Customizable plug-in functions

Which plug-in functions are displayed as well as the display order are customizable. Customers can add the functions they require.

In normal mode, various other test operation methods (program operation, jogging, moving of the constant rate, etc.), signal status monitoring, one-touch switching between Japanese and English, and other functions are available.

For immediate use, operate in easy mode.
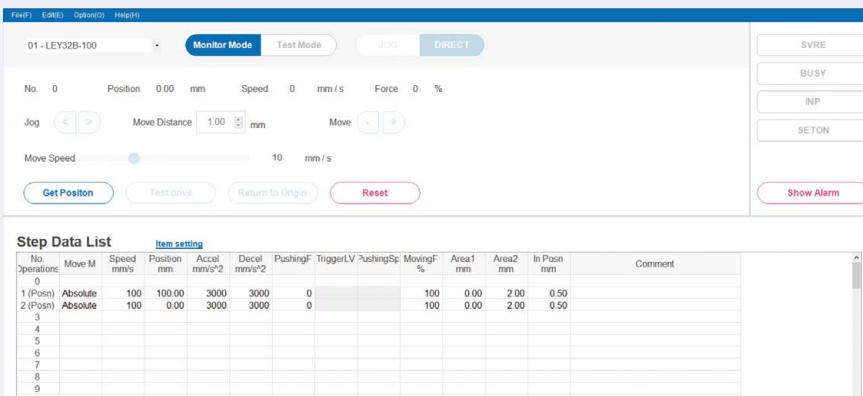

Step data setting, various test operations, and status confirmation can be done on a single screen.

How to download the setting software

Monitoring screen

Teaching box screen

- Each function (step data setting, test drive, monitoring, etc.) can be selected from the main menu.
◎ Easy Mode

- The simple screen without scrolling promotes ease of setting and operation.
- Choose an icon from the first screen to select a function.
- Set the step data and check the monitor on the second screen.

Example of setting the step data

1st screen

```
データ      モニタ      テスト
DATA      MONITOR    TEST

アラーム    ジョグ      設定
ALARM     JOG       SETTIN
```

2nd screen
```
Step          Axis 1
Step No.          0
Posn      123.45 mm
Speed     100 mm/s
```
After entering the values, they can be registered by pressing "SET."

Example of checking the operation status

1st screen

```
データ      モニタ      テスト
DATA      MONITOR    TEST

アラーム    ジョグ      設定
ALARM     JOG       SETTIN
```

2nd screen
```
Monitor       Axis 1
Step No.          1
Posn      12.34 mm
Speed     10 mm/s
```
The operation status can be checked.

Teaching box screen

- **Data can be set by inputting only the position and speed.** (Other conditions are preset.)

```
Step          Axis 1
Step No.          0
Posn      50.00 mm
Speed     200 mm/s
```
→
```
Step          Axis 1
Step No.          1
Posn      80.00 mm
Speed     100 mm/s
```

The actuator and controller are provided as a set. (They can be ordered separately as well.)

Confirm that the combination of the controller and actuator is correct.
<Check the following before use.>
① Check the actuator label for the model number. This number should match that of the controller.
② Check that the Parallel I/O configuration matches (NPN or PNP).

SMC

High Rigidity and High Precision Slider Type
LEKFS☐G Series Battery-less Absolute (Step Motor 24 VDC)

Model Selection

Selection Procedure

| Step 1 | Check the work load–speed. | → | Step 2 | Check the cycle time. | → | Step 3 | Check the allowable moment. |

Selection Example

Operating conditions

• Workpiece mass: 5 [kg]
• Speed: 300 [mm/s]
• Acceleration/Deceleration: 10000 [mm/s²]
• Stroke: 200 [mm]
• Mounting orientation: Horizontal upward

• Workpiece mounting condition:

W
100
**<Speed–Work load graph>
(LEKFS25GA/Battery-less absolute)**

Step 1 Check the work load–speed. <Speed–Work load graph> (pages 12 to 14)

Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

Selection example) The **LEKFS25GA-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate **the cycle time** using the following calculation method.
Cycle time:
T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

• T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

• T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V}[s]$$

• T4: Settling time varies depending on the conditions such as actuator types, load, and in position of the step data. Reference value for settling time: 0.15 [s] or less
The following value is used for this calculation.

$$T4 = 0.15 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/10000 = 0.03 \text{ [s]},$$

$$T3 = V/a2 = 300/10000 = 0.03 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V}$$

$$= \frac{200 - 0.5 \cdot 300 \cdot (0.03 + 0.03)}{300}$$

$$= 0.64 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

The cycle time can be found as follows.
T = T1 + T2 + T3 + T4
= 0.03 + 0.64 + 0.03 + 0.15
= **0.85 [s]**
L : Stroke [mm] ··· (Operating condition)
V : Speed [mm/s] ··· (Operating condition)
a1: Acceleration [mm/s²] ··· (Operating condition)
a2: Deceleration [mm/s²] ··· (Operating condition)

T1: Acceleration time [s]
　　Time until reaching the set speed
T2: Constant speed time [s]
　　Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
　　Time from the beginning of the constant speed operation to stop
T4: Settling time [s]
　　Time until positioning is completed

Step 3 Check the allowable moment. <Static allowable moment> (page 14)
<Dynamic allowable moment> (pages 15, 16)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Mep
m
L3
**Based on the above calculation result, the LEKFS25GA-200 should be selected.**
∗ If the step motor and servo motors do not meet your specifications, also consider the AC servo specification.

Calculation of Guide Load Factor

1. Decide operating conditions.
   Model: LEKFS□G
   Size: 25/32/40
   Mounting orientation: Horizontal/Bottom/Wall/Vertical
   Acceleration [mm/s²]: **a**
   Work load [kg]: **m**
   Work load center position [mm]: **Xc/Yc/Zc**
2. Select the target graph while referencing the model, size, and mounting orientation.
3. Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.
4. Calculate the load factor for each direction.
   α**x = Xc/Lx**, α**y = Yc/Ly**, α**z = Zc/Lz**
5. Confirm the total of αx, αy, and αz is 1 or less.
   α**x + αy + αz ≤ 1**
   When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation

1. Horizontal
2. Bottom
3. Wall
4. Vertical
Example

1. Operating conditions
   Model: LEKFS40G
   Size: 40
   Mounting orientation: Horizontal
   Acceleration [mm/s²]: 10000
   Work load [kg]: 20
   Work load center position [mm]: **Xc = 0**, **Yc = 50**, **Zc = 200**
2. Select the graphs for horizontal of the LEKFS40G on page 15.

3. **Lx = 380 mm**, **Ly = 320 mm**, **Lz = 740 mm**
4. The load factor for each direction can be found as follows.
   α**x = 0/380 = 0**
   α**y = 50/320 = 0.156**
   α**z = 200/740 = 0.270**

⚠Caution

[CE/UKCA-compliant products]

EMC compliance was tested by combining the electric actuator LEF series and the controller JXC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

■Trademark

EtherNet/IP® is a registered trademark of ODVA, Inc.
EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

The actuator and controller are sold as a package.

Confirm that the combination of the controller and actuator is correct.

<Check the following before use.>

∗1 Check the actuator label for the model number. This number should match that of the controller.

LEKFS25GA-400

∗1
∗ Refer to the Operation Manual for using the products.

[*1] Please contact SMC for non-standard strokes as they are produced as special orders.
[*2] The max. work load at 3000 mm/s^2 acceleration and deceleration speed
　Work load varies depending on the speed and acceleration. Check the "Speed–Work Load Graph" on pages 12 to 14.
　Furthermore, if the cable length exceeds 5 m, the speed and work load specified in the "Speed–Work Load Graph" may decrease by up to 10% for each 5 m increase.
[*3] A reference value for correcting errors in reciprocal operation
[*4] Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
　Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
[*5] Indicates the max. power during operation (including the controller)
　This value can be used for the selection of the power supply.
[*6] With lock only
[*7] For an actuator with lock, add the power for the lock.

Auto switch mounting bracket
Part no.: **BMY3-016**

Auto switch mounting groove

∗ The applicable auto switch is D-M9 (N/P/B) (W) (M/L/Z).
∗ When tightening the auto switch mounting screw (included with the auto switch), use a watchmaker's screwdriver with a handle diameter of 5 to 6 mm.
∗ Prepare an auto switch mounting bracket (BMY3-016) when mounting the auto switch on to the LEKFS32G/40G.

Normally Closed Solid State Auto Switch Direct Mounting Type
D-M9NE(V)/D-M9PE(V)/D-M9BE(V) CE RoHS

Grommet

● **Output signal turns on when no magnetic force is detected.**
● **Can be used for the actuator adopted by the solid state auto switch D-M9 series (excluding special order products)**

⚠Caution

Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications

Refer to the SMC website for details on products that are compliant with international standards.

* Refer to the operation manual for using the products. Please download it via our website:

Precautions for blank controllers (JXC☐1☐☐-BC)

A blank controller is a controller to which the customer can write the data of the actuator it is to be combined and used with. For data writing, use the controller setting software ACT Controller 2 or the dedicated software JXC-BCW.
• Both ACT Controller 2 and JXC-BCW can be downloaded from the SMC website.
• To use this software, order the communication cable for controller setting (JXC-W2A-C) and the USB cable (LEC-W2-U) separately.

Insulation resistance [MΩ]	Between all external terminals and the case: 50 (500 VDC)
Weight [g]	150 (Screw mounting), 170 (DIN rail mounting)

⚠**Caution**

[CE/UKCA-compliant products]
EMC compliance was tested by combining the electric actuator LE series and the JXC5H/6H series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

Wiring Example 1

Parallel I/O Connector

* When you connect a PLC to the parallel I/O connector, use the I/O cable (LEC-CN5-□).
* The wiring changes depending on the type of parallel I/O (NPN or PNP).

Wiring diagram

JXC5H□□ (NPN)
JXC6H□□ (PNP)
Input Signal

Name	Details
COM+	Connects the power supply 24 V for input/output signal
COM−	Connects the power supply 0 V for input/output signal
IN0 to IN5	Step data specified bit no. (Input is instructed by combining IN0 to 5.)
SETUP	Instruction to return to origin
HOLD	Temporarily stops operation
DRIVE	Instruction to drive
RESET	Resets alarm and interrupts operation
SVON	Servo ON instruction

Output Signal

Name	Details
OUT0 to OUT5	Outputs the step data no. during operation
BUSY	Outputs when the actuator is moving
AREA	Outputs within the step data area output setting range
SETON	Outputs when returning to origin
INP	Outputs when target position or target force is reached (Turns on when the positioning or pushing is completed.)
SVRE	Outputs when servo is on
*ESTOP[1]	OFF when EMG stop is instructed
*ALARM[1]	OFF when alarm is generated

*1 Signal of negative-logic circuit (N.C.)

Step Data Setting

1. Step data setting for positioning

In this setting, the actuator moves toward and stops at the target position.
The following diagram shows the setting items and operation.
The setting items and set values for this operation are stated below.
◎: Need to be set.
○: Need to be adjusted as required.
—: Setting is not required.

Step Data (Positioning)

Necessity	Item	Details
◎	Movement MOD	When the absolute position is required, set Absolute. When the relative position is required, set Relative.
◎	Speed	Transfer speed to the target position
◎	Position	Target position
○	Acceleration	Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set.
○	Deceleration	Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops.
◎	Pushing force	Set 0. (If values 1 to 100 are set, the operation will be changed to the pushing operation.)
—	Trigger LV	Setting is not required.
—	Pushing speed	Setting is not required.
○	Moving force	Max. torque during the positioning operation (No specific change is required.)
○	Area 1, Area 2	Condition that turns on the AREA output signal.
○	In position	Condition that turns on the INP output signal. When the actuator enters the range of [in position], the INP output signal turns on. (It is unnecessary to change this from the initial value.) When it is necessary to output the arrival signal before the operation is completed, make the value larger.

2. Step data setting for pushing

The actuator moves toward the pushing start position, and when it reaches that position, it starts pushing with the set force or less.
The following diagram shows the setting items and operation.
The setting items and set values for this operation are stated below.
◎: Need to be set.
○: Need to be adjusted as required.

Step Data (Pushing)

Necessity	Item	Details
◎	Movement MOD	When the absolute position is required, set Absolute. When the relative position is required, set Relative.
◎	Speed	Transfer speed to the pushing start position
◎	Position	Pushing start position
○	Acceleration	Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set.
○	Deceleration	Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops.
◎	Pushing force	Pushing force ratio is defined. The setting range differs depending on the electric actuator type. Refer to the operation manual for the electric actuator.
◎	Trigger LV	Condition that turns on the INP output signal. The INP output signal turns on when the generated force exceeds the value. Trigger level should be the pushing force or less.
○	Pushing speed	Pushing speed during pushing. When the speed is set fast, the electric actuator and workpieces might be damaged due to the impact when they hit the end, so this set value should be smaller. Refer to the operation manual for the electric actuator.
○	Moving force	Max. torque during the positioning operation (No specific change is required.)
○	Area 1, Area 2	Condition that turns on the AREA output signal.
◎	In position	Transfer distance during pushing. If the transferred distance exceeds the setting, it stops even if it is not pushing. If the transfer distance is exceeded, the INP output signal will not turn on.

SMC

Signal Timing

Return to Origin

If the actuator is within the "In position" range of the basic parameter, INP will turn ON, but if not, it will remain OFF.
∗ "∗ALARM" and "∗ESTOP" are expressed as negative-logic circuits.

Positioning Operation

If the actuator is within the "In position" range of the step data, INP will turn ON, but if not, it will remain OFF.
∗ "OUT" is output when "DRIVE" is changed from ON to OFF.
Refer to the operation manual for details on the controller for the LEM series.
(When power supply is applied, "DRIVE" or "RESET" is turned ON or
"∗ESTOP" is turned OFF, all of the "OUT" outputs are OFF.)

Pushing Operation

If the current pushing force exceeds the "Trigger LV" value of the step data, INP signal will turn ON.
HOLD

∗ When the actuator is within the "In position" range in the pushing operation, it does not stop even if HOLD signal is input.

Reset

It is possible to identify the alarm group by the combination of OUT signals when the alarm is generated.
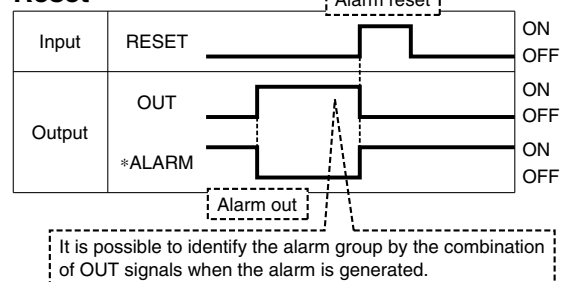

∗ "∗ALARM" is expressed as a negative-logic circuit.

Options

■ Communication cable for controller setting

① Communication cable JXC-W2A-C
∗ It can be connected to the controller directly.

Example of Operation Command

In addition to the step data input of 64 points maximum in each communication protocol, the changing of each parameter can be performed in real time via numerical data defined operation.
∗ Numerical values other than "Moving force," "Area 1," and "Area 2" can be used to perform operation under numerical instructions from JXCL1.

<Application example> Movement between 2 points

No.	Movement mode	Speed	Position	Acceleration	Deceleration	Pushing force	Trigger LV	Pushing speed	Moving force	Area 1	Area 2	In position
0	1: Absolute	100	10	3000	3000	0	0	0	100	0	0	0.50
1	1: Absolute	100	100	3000	3000	0	0	0	100	0	0	0.50

<Step no. defined operation>
Sequence 1: Servo ON instruction
Sequence 2: Instruction to return to origin
Sequence 3: Specify step data No. 0 to input the DRIVE signal.
Sequence 4: Specify step data No. 1 after the DRIVE signal has been temporarily turned OFF to input the DRIVE signal.

<Numerical data defined operation>
Sequence 1: Servo ON instruction
Sequence 2: Instruction to return to origin
Sequence 3: Specify step data No. 0 and turn ON the input instruction flag (position). Input 10 in the target position. Subsequently the start flag turns ON.
Sequence 4: Turn ON step data No. 0 and the input instruction flag (position) to change the target position to 100 while the start flag is ON.

The same operation can be performed with any operation command.

DIN rail mounting adapter
LEC-3-D0 (with 2 mounting screws)

This should be used when the DIN rail mounting adapter is mounted onto a screw mounting type controller afterward.

Options

■Communication cable for controller setting

① Communication cable JXC-W2A-C

∗ It can be connected to the controller directly.

② USB cable LEC-W2-U

300

③Controller setting kit JXC-W2A

A set which includes a communication cable (JXC-W2A-C) and a USB cable (LEC-W2-U)

<Controller setting software/USB driver>
· Controller setting software
· USB driver (For JXC-W2A-C)
Download from SMC's website.

Hardware Requirements

OS	Windows®7, Windows®8.1, Windows®10
Communication interface	USB 1.1 or USB 2.0 ports
Display	1024 x 768 or more

∗ Windows®7, Windows®8.1 and Windows®10 are registered trademarks of Microsoft Corporation in the United States.

■DIN rail mounting adapter LEC-3-D0
∗ With 2 mounting screws

This should be used when the DIN rail mounting adapter is mounted onto a screw mounting type controller afterward.

■DIN rail AXT100-DR-□

∗ For □, enter a number from the No. line in the table on page 41. Refer to the dimension drawings on pages 40 and 41 for the mounting dimensions.

■Teaching box

Specifications

Item	Description
Switch	Stop switch, Enable switch (Option)
Cable length [m]	3
Enclosure	IP64 (Except connector)
Operating temperature range [°C]	5 to 50
Operating humidity range [%RH]	90 or less (No condensation)
Weight [g]	350 (Except cable)

■Power supply plug JXC-CPW
∗ The power supply plug is an accessory.

⑥⑤④		① C24V	④ 0V
③②①		② M24V	⑤ N.C.
		③ EMG	⑥ LK RLS

Power supply plug

Terminal name	Function	Details
0V	Common supply (−)	The M24V terminal, C24V terminal, EMG terminal, and LK RLS terminal are common (−).
M24V	Motor power supply (+)	Motor power supply (+) of the controller
C24V	Control power supply (+)	Control power supply (+) of the controller
EMG	Stop (+)	Connection terminal of the external stop circuit
LK RLS	Lock release (+)	Connection terminal of the lock release switch

■Conversion cable P5062-5 (Cable length: 300 mm)
300

∗ To connect the teaching box (LEC-T1-3□G□) or controller setting kit (LEC-W2) to the controller, a conversion cable is required.

■Noise filter set

LEC − NFA

Contents of the set: 2 noise filters
(Manufactured by WURTH ELEKTRONIK: 74271222)

(33.5)   (42.2)   (28.8)   (12.5)

SMC

LEKFS☐G Series
Battery-less Absolute Encoder Type Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For electric actuator precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website.

Handling

⚠ Caution

1. Absolute encoder ID mismatch error at the first connection

In the following cases, an "ID mismatch error" alarm occurs after the power is turned ON. Perform a return to origin operation after resetting the alarm before use.

· When an electric actuator is connected and the power is turned ON for the first time after purchase[*1]
· When the actuator or motor is replaced
· When the controller is replaced

[*1] If you have purchased an electric actuator and controller with the set part number, the pairing may have already been completed and the alarm may not be generated.

"ID mismatch error"

Operation is enabled by matching the encoder ID on the electric actuator side with the ID registered in the controller. This alarm occurs when the encoder ID is different from the registered contents of the controller. By resetting this alarm, the encoder ID is registered (paired) to the controller again.

When a controller is changed after pairing is completed			
	Encoder ID no. (∗ Numbers below are examples.)		
Actuator	17623	17623	17623	17623
Controller	17623	17699	17699	17623
ID mismatch error occurred?	No	Yes	Error reset ⇒ No	

Encoder ID no. on the actuator side
Encoder ID no. on the controller side
The ID number is automatically checked when the control power supply is turned ON.
An error is output if the ID number does not match.

2. In environments where strong magnetic fields are present, use may be limited.

A magnetic sensor is used in the encoder. Therefore, if the actuator motor is used in an environment where strong magnetic fields are present, malfunction or failure may occur.
Do not expose the actuator motor to magnetic fields with a magnetic flux density of 1 mT or more.
When installing an electric actuator and an air cylinder with an auto switch (ex. CDQ2 series) or multiple electric actuators side by side, maintain a space of 40 mm or more around the motor. Refer to the construction drawing of the actuator motor.

40
40
40
40
40
An air cylinder with an auto switch cannot be installed in the shaded area.

● When lining up actuators

SMC actuators can be used with their motors adjacent to each other. However, for actuators with a built-in auto switch magnet, maintain a space of 40 mm or more between the motors and the position where the magnet passes.
For the LEF series, the magnet is in the middle of the table, and for the LEY series, the magnet is in the piston portion. (Refer to the construction drawings in the catalog for details.)

○ Can be used with their motors adjacent to each other
✕ Do not allow the motors to be in close proximity to the position where the magnet passes.

Motor

Electric actuator built-in magnet portion (Screw nut)

Motor

Maintain a space of 40 mm or more.

Electric actuator built-in magnet portion (Table unit)
3. The connector size of the motor cable is different from that of the electric actuator with an incremental encoder.

The motor cable connector of an electric actuator with a battery-less absolute encoder is different from that of an electric actuator with an incremental encoder. As the connector cover dimensions are different, take the dimensions below into consideration during the design process.
