e-Actuator

* Excludes size 16

For details, refer to page 81.

Easy to Operate Integrated Controller

RoHS

Slider Type/Rod Type/Guide Rod Type

Battery-less Absolute (Step Motor 24 VDC)

Easy to set up,

just like air equipment!

Space saving
Built-in controller

Wiring saving

Labor saving
Programless
Reduced adjustment time

Annual CO_2 emissions: Max. 59% reduction
(SMC comparison) p. 4

5.8 kg-CO_2e/year **(14.1)**

* The numerical values vary depending on the operating conditions.

2-position stop
- Single solenoid mode
- Double solenoid mode

Control mode switching

3-position stop
- Closed center mode

Cycle time setting available

p. 4
Adopts metal connectors

EQFS□H/EQY□H/EQYG□H Series

SMC

CAT.ES100-154C

Simple setting allows for immediate use.

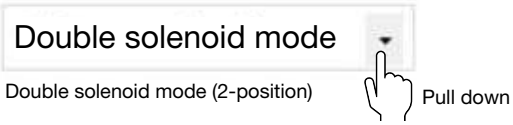
Two position stop with no programming required

For single solenoid mode (2-position)/ double solenoid mode (2-position)

All configurable on one screen.
Just **2 steps** to complete!

* When used in single solenoid mode, the control mode must be changed.

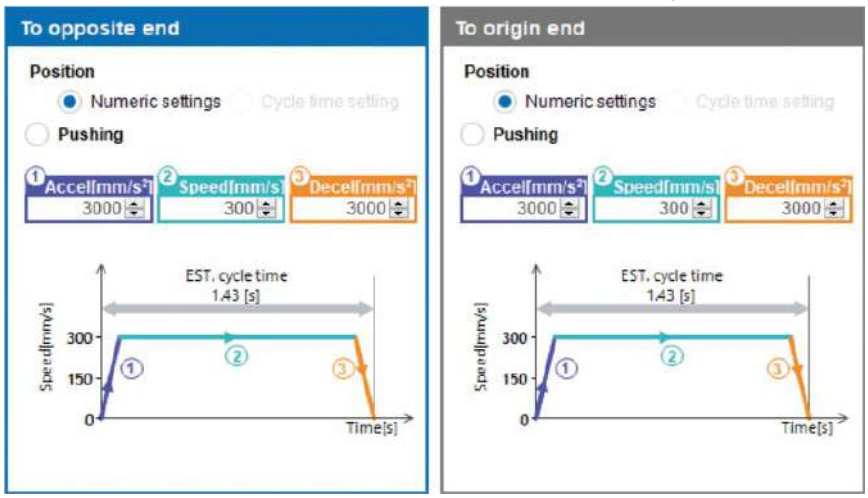
Step 1 Select the control mode.



Step 2 Set the speed, acceleration, and deceleration.

Operating Conditions

* In these charts, settling time is not included.



Setting complete Test operation is possible immediately after setting up.

Just press the forward/backward button.

⚠ Caution

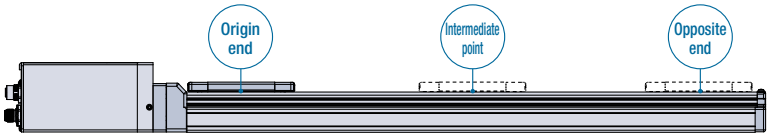
The stop position can be changed.
For use in positions other than the default setting, refer to the operation manual.

Easy to set intermediate positions

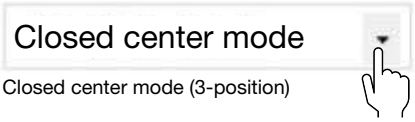
Three position stop with no programming required

For closed center mode (3-position)

All configurable on one screen.
Just **3 steps** to complete!



Step 1 Select the control mode.



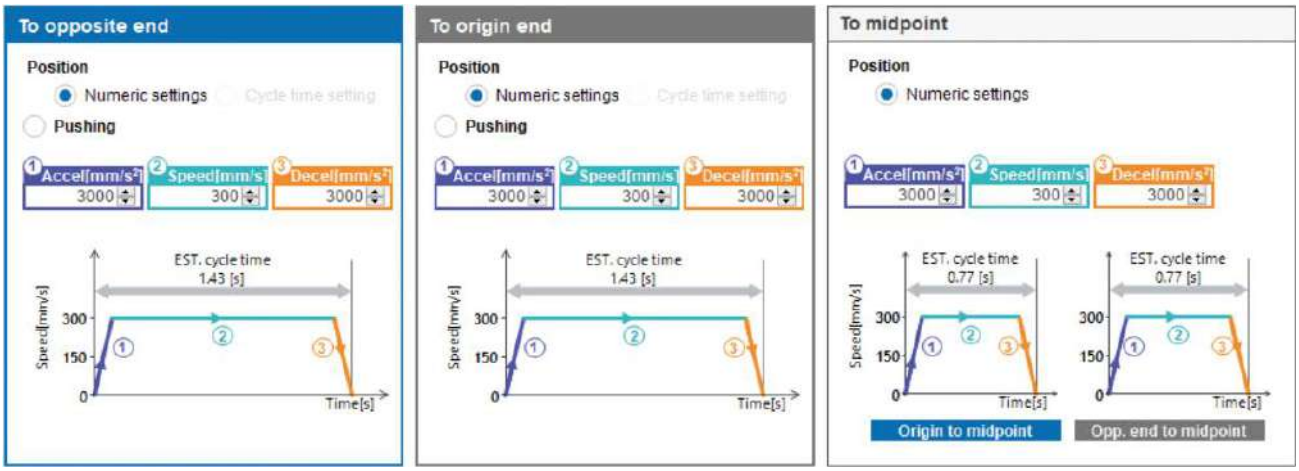
Step 2 Set the intermediate point position.

Position Setup

Step 3 Set the speed, acceleration, and deceleration.

Operating Conditions

＊ In these charts, settling time is not included.



Setting complete Test operation is possible immediately after setting up.

Just press the forward/backward button.

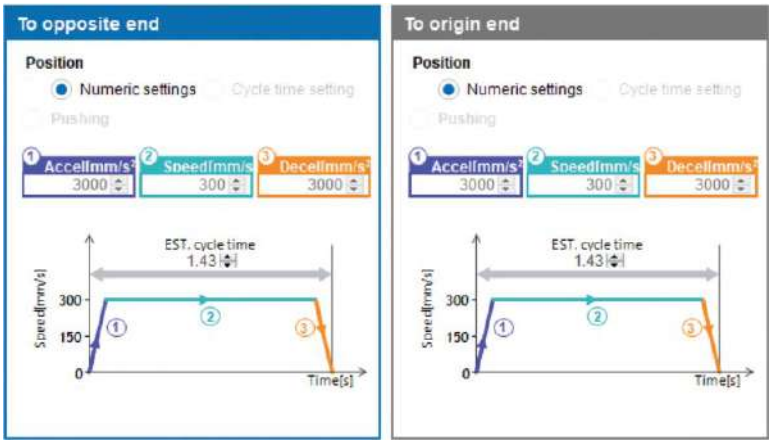
Cycle times are also *easily set.*

Cycle time can be set in all control modes.

For single solenoid mode (2-position)/ double solenoid mode (2-position)

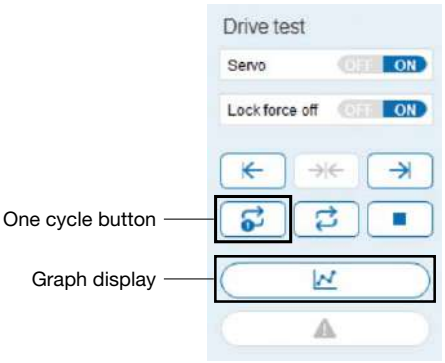
Step 1 Temporary setting of forward and backward speeds, acceleration/deceleration

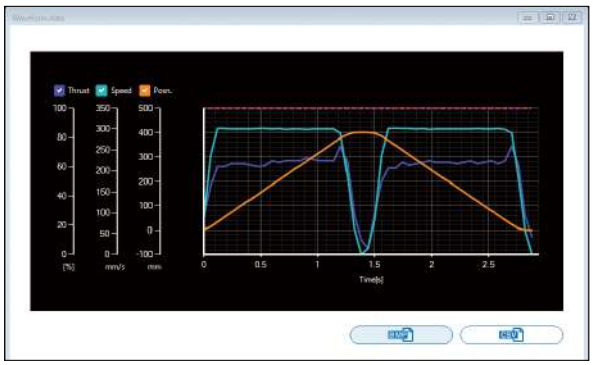
Operating Conditions



* In these charts, settling time is not included.
* The operating conditions to an intermediate point do not correspond to the cycle time setting.
* Cycle time cannot be set for pushing operation.

Step 2 Operate one cycle and check the graph.

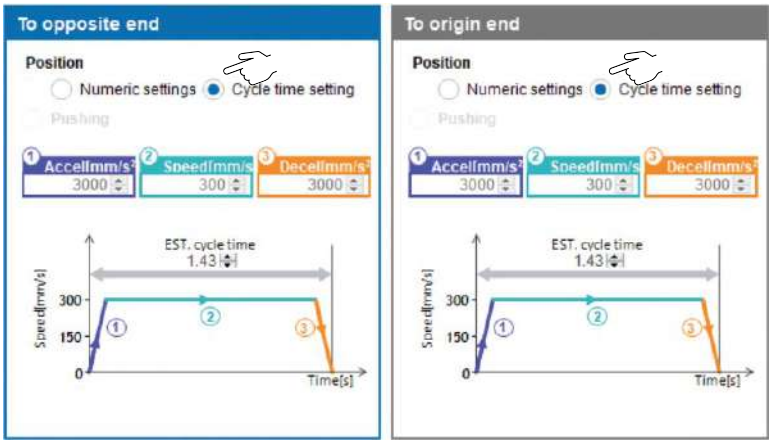




Green: Current speed
Blue: Current force
Orange: Current position

Setting complete Adjustable according to cycle time

Operating Conditions

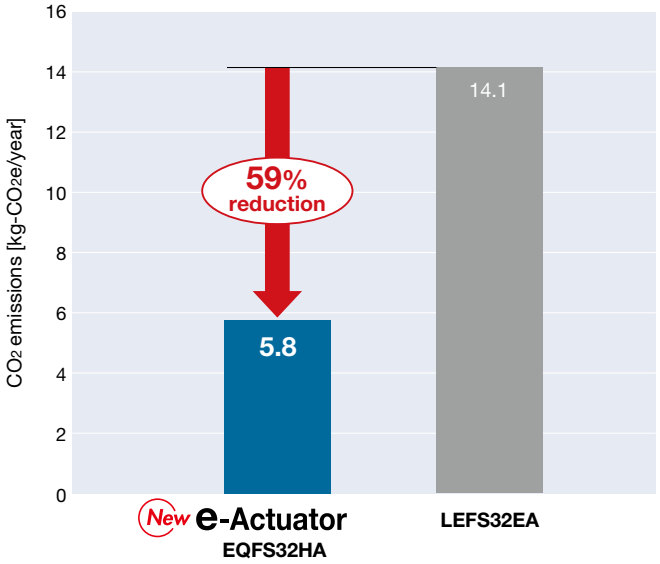


* In these charts, settling time is not included.

⚠ Caution

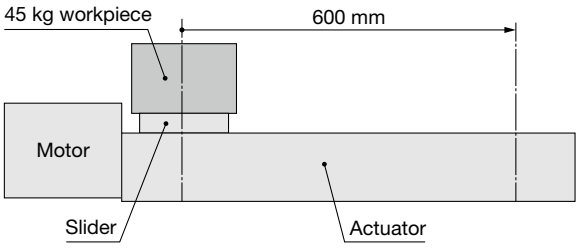
The stop position can be changed. For use in positions other than the default setting, refer to the operation manual.

Annual CO_2 emissions reduced by up to 59% through motor control optimization (SMC comparison)



Operating conditions

- Slider type, Size 32
- Speed: 50 mm/s
- Acceleration/Deceleration: 3000 mm/s²
- Duty ratio: 20%



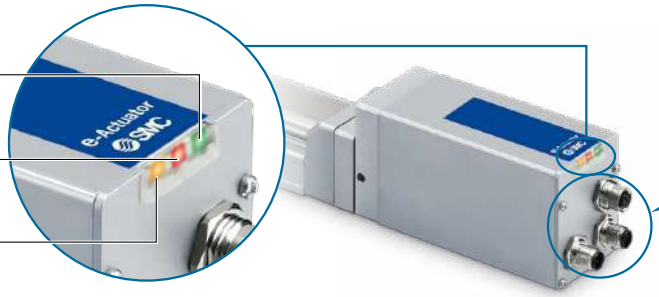
∗ The numerical values vary depending on the operating conditions.

LEDs indicate the load condition.

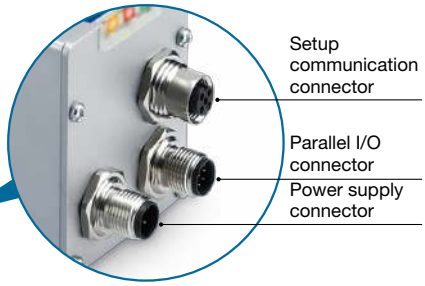
PWR Green :
Lights up during normal operation after power on

ALM Red :
Lights up when an alarm is generated

OVL Orange :
Lights up when an overload condition occurs



Increased metal connector strength

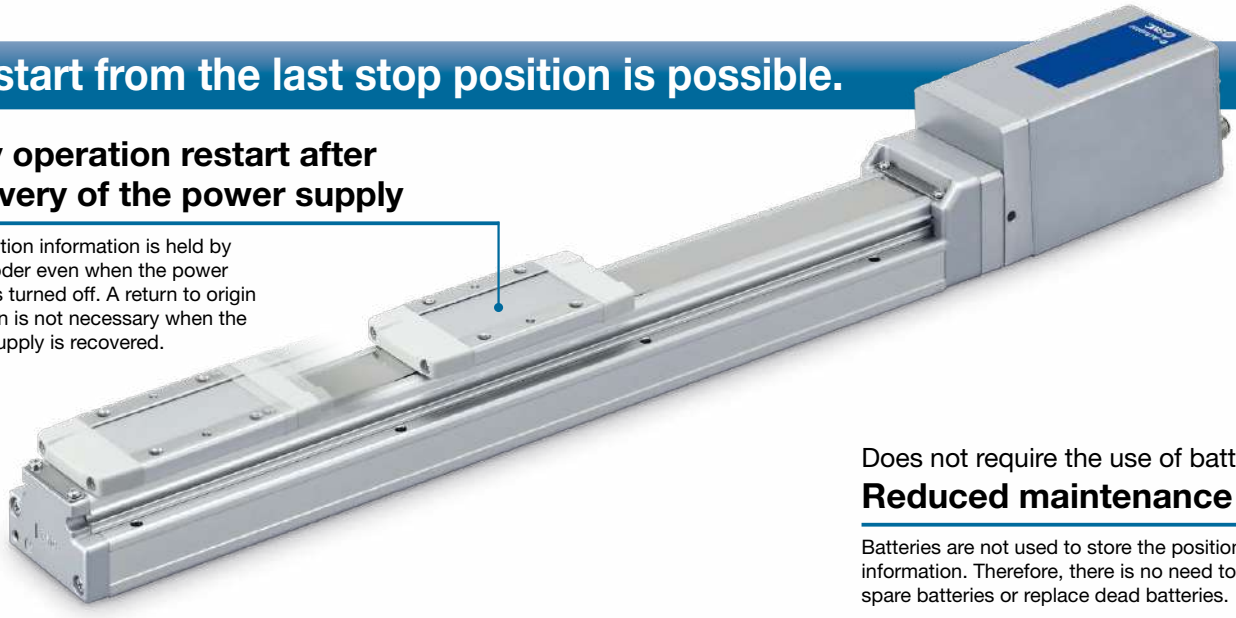


∗ A female dustproof cap comes with the setup communication connector (M12).

Restart from the last stop position is possible.

Easy operation restart after recovery of the power supply

The position information is held by the encoder even when the power supply is turned off. A return to origin operation is not necessary when the power supply is recovered.



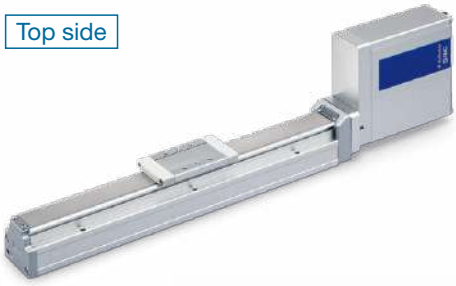
Does not require the use of batteries.

Reduced maintenance

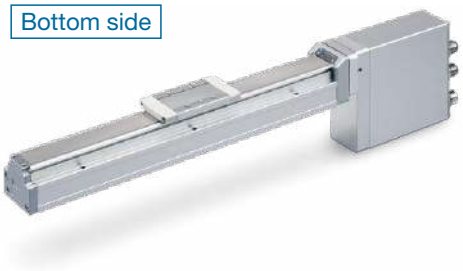
Batteries are not used to store the position information. Therefore, there is no need to store spare batteries or replace dead batteries.

Can be selected from 4 directions (In-line motor type)

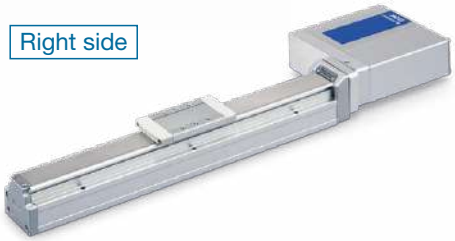
Top side



Bottom side



Right side



Left side

Detection of table stop position by means of an auto switch is possible. p. 29

2-color indicator solid state auto switch (D-M9□ series)

Accurate setting of the mounting position can be performed without mistakes.

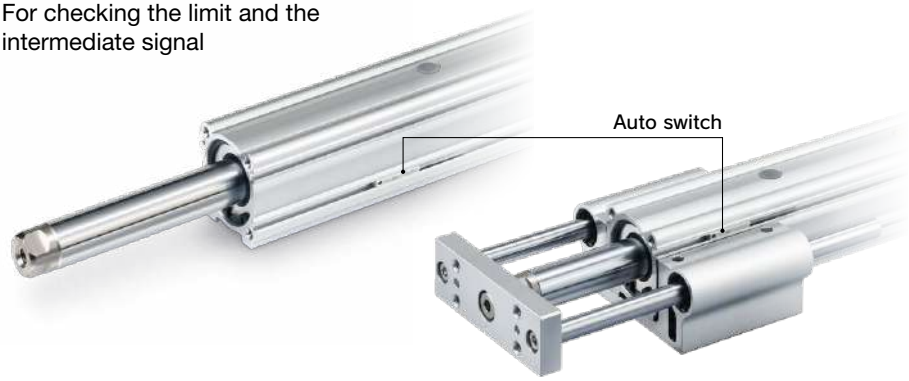
A green light lights up when within the optimum operating range.

For the slider type

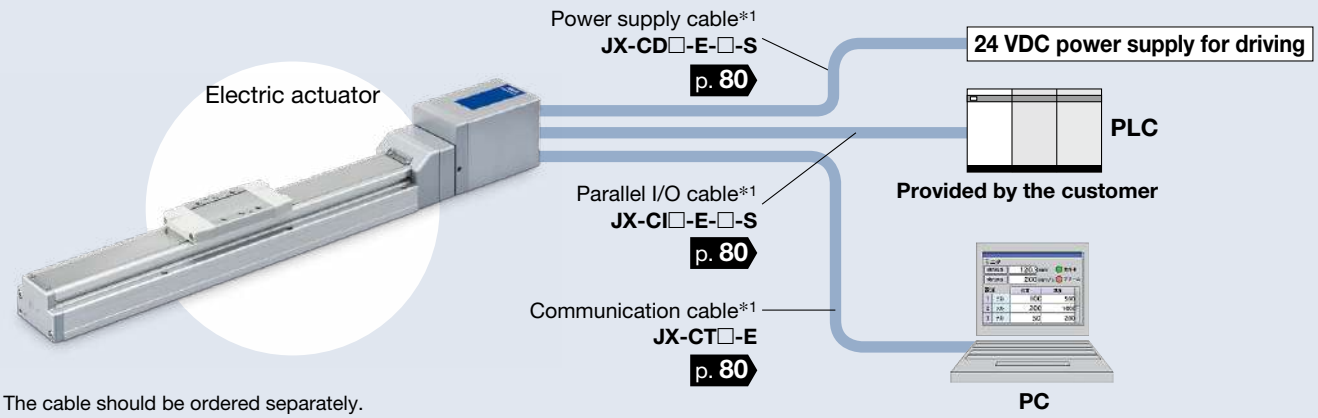
Allows for position detection of the table throughout the stroke

For the rod type/guide rod type

For checking the limit and the intermediate signal



System Construction/General Purpose I/O



*1 The cable should be ordered separately.

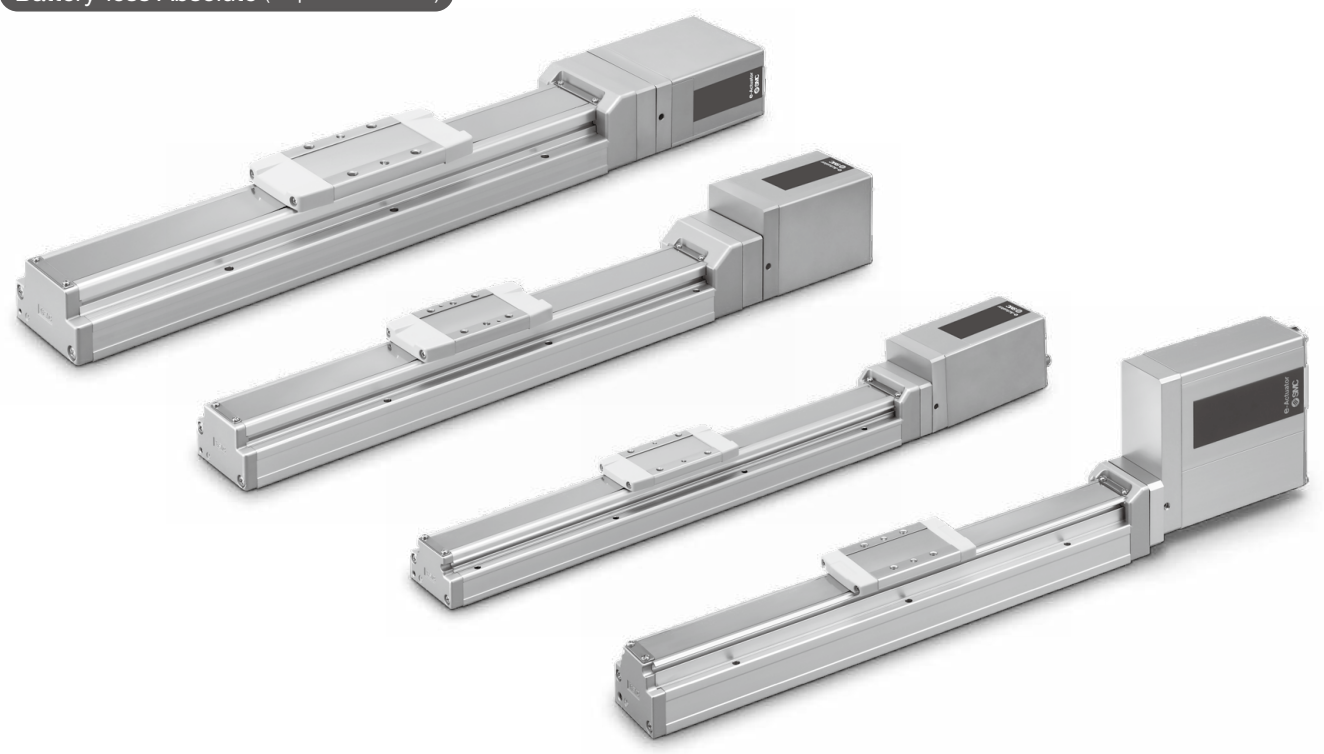
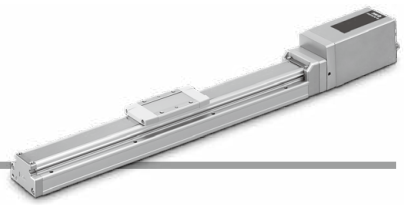
Battery-less Absolute (Step Motor 24 VDC)



Model Selection



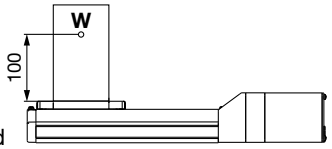
Selection Procedure

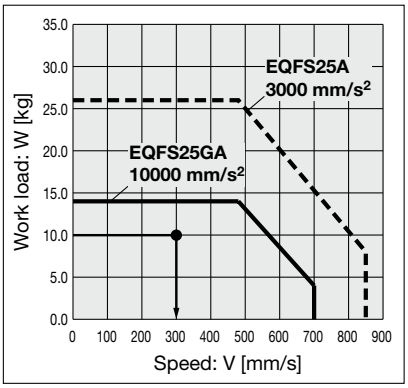
Step 1 Check the work load–speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

Operating conditions

- Workpiece mass: 10 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 10000 [mm/s²]
- Stroke: 200 [mm]
- Mounting orientation: Horizontal upward
- Workpiece mounting condition:





<Speed–Work load graph>
(EQFS25HA/Battery-less absolute)

Step 1 **Check the work load–speed. <Speed–Work load graph>** (pages 10 to 13)

Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

Selection example) The **EQFS25HA-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \qquad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as actuator types, load, and in position of the step data.
  Reference value for settling time:
  0.15 s or less
  The following value is used for this calculation.

$$T4 = 0.15 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$T1 = V/a1 = 300/10000 = 0.03$ [s],

$T3 = V/a2 = 300/10000 = 0.03$ [s]

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V}$$

$$= \frac{200 - 0.5 \cdot 300 \cdot (0.03 + 0.03)}{300}$$

$= 0.64$ [s]

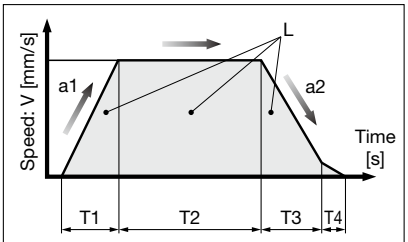
$T4 = 0.15$ [s]

The cycle time can be found as follows.

$T = T1 + T2 + T3 + T4$

$= 0.03 + 0.64 + 0.03 + 0.15$

$=$ **0.85 [s]**

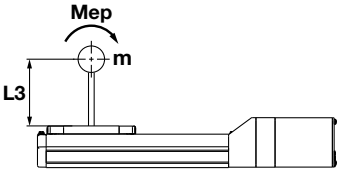


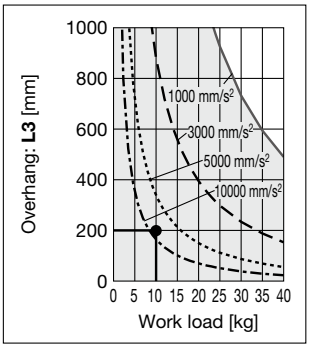
L : Stroke [mm] ··· (Operating condition)
V : Speed [mm/s] ··· (Operating condition)
a1: Acceleration [mm/s²] ··· (Operating condition)
a2: Deceleration [mm/s²] ··· (Operating condition)

T1: Acceleration time [s]
Time until reaching the set speed
T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
T4: Settling time [s]
Time until positioning is completed

Step 3 **Check the allowable moment.** **<Static allowable moment>** (page 13)
<Dynamic allowable moment> (pages 14 and 15)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.





Based on the above calculation result, the EQFS25A-200 should be selected.

Static Allowable Moment*1

[N·m]

Model	Size	Pitching	Yawing	Rolling
EQFS□H	**16**	10.0	10.0	20.0
	25	27.0	27.0	52.0
	32	46.0	46.0	101.0
	40	110.0	110.0	207.0

*1 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

Dynamic Allowable Moment

* These graphs show the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction.

Acceleration ——1000 mm/s² — — —3000 mm/s² ·····5000 mm/s² –·–·–10000 mm/s²

Orientation	Load overhanging direction **m** : Work load [kg] **Me**: Allowable moment [N·m] **L** : Overhang to the work load center of gravity [mm]		Model EQFS16□H	Model EQFS25□H	Model EQFS32□H	Model EQFS40□H

Vertical		Y						Z				
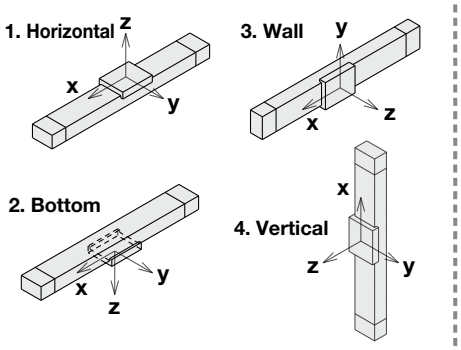
Calculation of Guide Load Factor

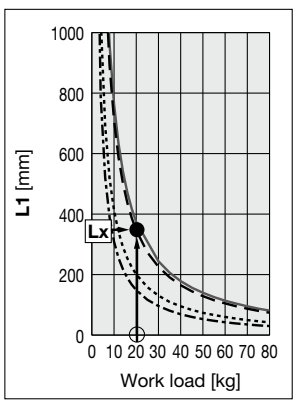
1. Decide operating conditions.
   Model: EQFS□H
   Size: 16/25/32/40
   Mounting orientation: Horizontal/Bottom/Wall/Vertical
   Acceleration [mm/s²]: **a**
   Work load [kg]: **m**
   Work load center position [mm]: **Xc/Yc/Zc**
2. Select the target graph while referencing the model, size, and mounting orientation.
3. Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.
4. Calculate the load factor for each direction.
   $\alpha x = Xc/Lx$, $\alpha y = Yc/Ly$, $\alpha z = Zc/Lz$
5. Confirm the total of αx, αy, and αz is 1 or less.
   $\alpha x + \alpha y + \alpha z \leq 1$
   When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

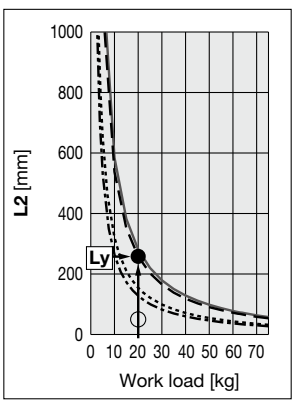
Mounting orientation



Example

1. Operating conditions
   Model: EQFS40□H
   Size: 40
   Mounting orientation: Horizontal
   Acceleration [mm/s²]: 3000
   Work load [kg]: 20
   Work load center position [mm]: **Xc = 0**, **Yc = 50**, **Zc = 200**
2. Select the graphs for horizontal of the EQFS40□H on page 14.
3. **Lx = 350 mm**, **Ly = 250 mm**, **Lz = 1000 mm**
4. The load factor for each direction can be found as follows.
   $\alpha x = 0/350 = 0$
   $\alpha y = 50/250 = 0.2$
   $\alpha z = 200/1000 = 0.2$
5. $\alpha x + \alpha y + \alpha z = 0.4 \leq 1$





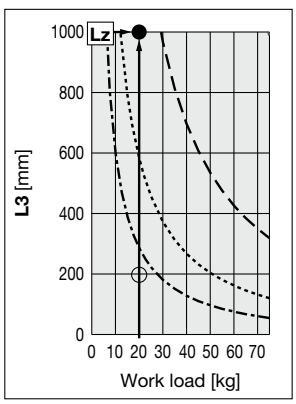


Table Accuracy (Reference Value)

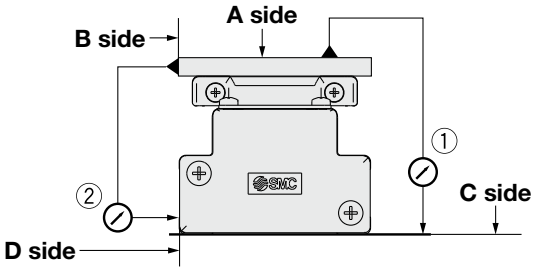
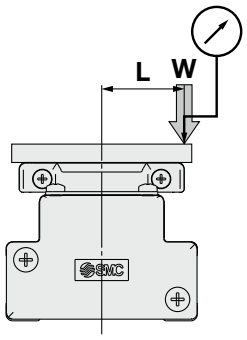
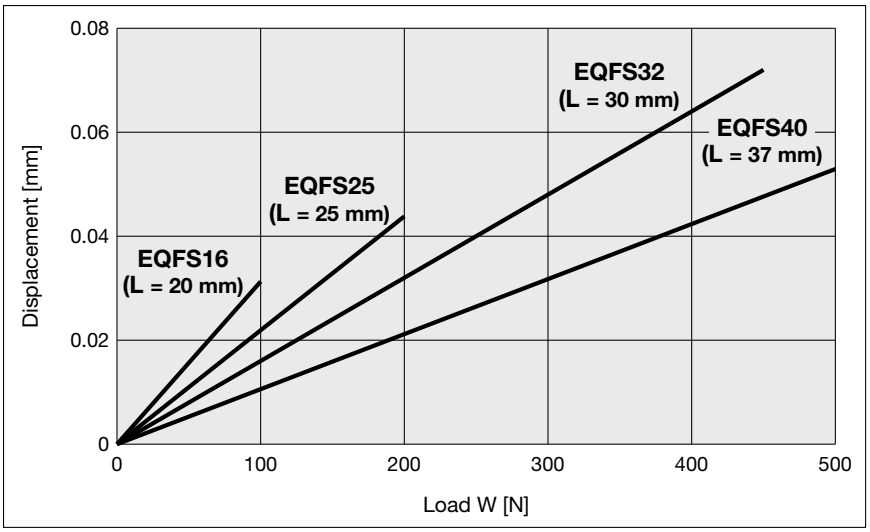


Model	Traveling parallelism [mm] (Every 300 mm)	
	① C side traveling parallelism to A side	② D side traveling parallelism to B side
EQFS16	0.05	0.03
EQFS25	0.05	0.03
EQFS32	0.05	0.03
EQFS40	0.05	0.03

∗ Traveling parallelism does not include the mounting surface accuracy. (Excludes when the stroke exceeds 2000 mm)

Table Displacement (Reference Value)





∗ This displacement is measured when a 15 mm aluminum plate is mounted and fixed on the table.
∗ Check the clearance and play of the guide separately.

*1 Please contact SMC for non-standard strokes as they are produced as special orders.
*2 The max. work load at 3000 mm/s² acceleration and deceleration speed
Work load varies depending on the speed and acceleration. Check the "Speed–Work Load Graph."
Furthermore, if the cable length exceeds 5 m, the speed and work load specified in the "Speed–Work Load Graph" may decrease by up to 10% for each 5 m increase.
*3 A reference value for correcting errors in reciprocal operation
*4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
*5 Indicates the max. power during operation (including the controller). This value can be used for the selection of the power supply.
*6 With lock only
*7 For an actuator with lock, add the power for the lock.

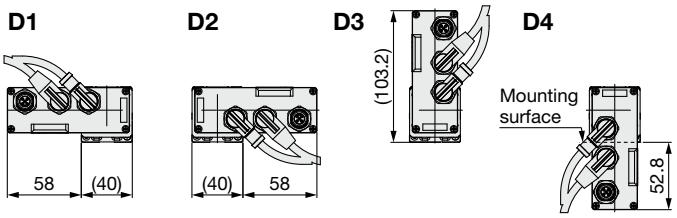
Cable/Right angled connector mounting view∗7

Motor mounting position: Motor cover direction (Right angled cable)



Required Space∗7 [mm]

Cable connector type	J	K
Straight	115	115
Right angled	50∗9	25

∗9 Secure a space of 100 mm or more to connect the communication cable for controller setting.

∗1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
∗2 The distance the table moves according to movement instructions
Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
∗3 Indicates the factory default origin position (0 mm)
∗4 [ ] refers to when the rotation direction reference is changed.
∗5 The applicable auto switch (D-M9□) should be ordered separately.
∗6 When using the positioning pin holes on the bottom, use either the one on the body side or the one on the housing side.
∗7 The amount of space required to connect the various cables and mount the product
Provide this amount of space for cable handling. Order the cable separately.
∗8 A female dustproof cap comes with the setup communication connector (M12).

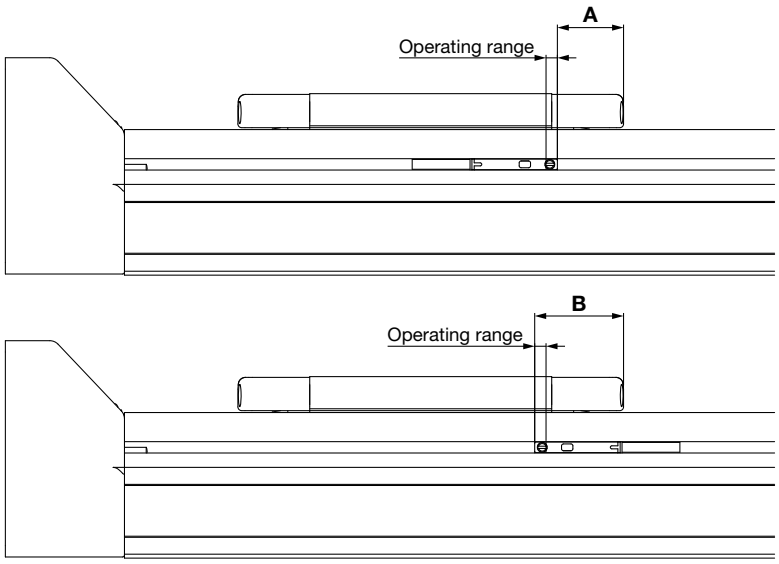
Auto Switch Mounting

Auto Switch Proper Mounting Position

Applicable auto switch: D-M9□, D-M9□E(V), D-M9□W



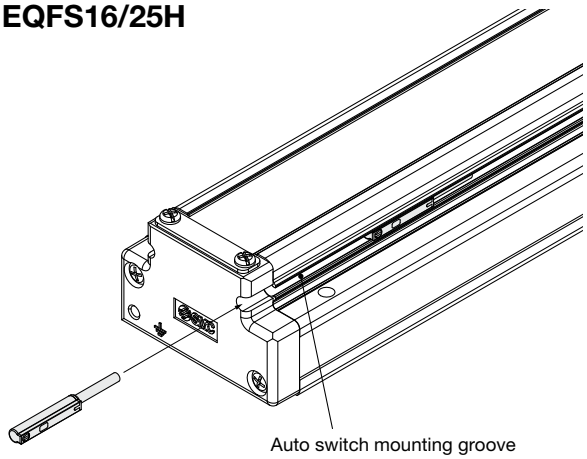
[mm]

Size	A	B	Operating range
16	12.5	24.5	3.0
25	17.5	23.5	3.0
32	26.3	32.3	3.4
40	32.2	38.2	3.6

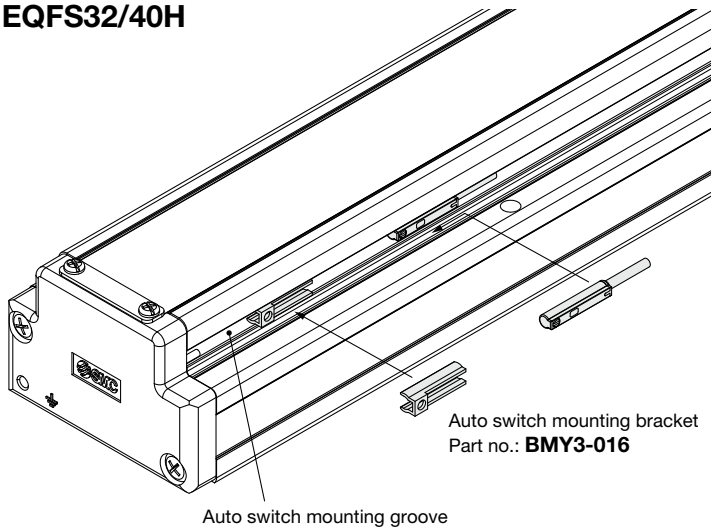
* The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations depending on the ambient environment.
* Adjust the auto switch after confirming the operating conditions in the actual setting.

Auto Switch Mounting

EQFS16/25H



EQFS32/40H



Tightening Torque for Auto Switch Mounting Screw [N·m]

Auto switch model	Tightening torque
D-M9□ **D-M9□E(V)** **D-M9□W**	0.1 to 0.15

* When tightening the auto switch mounting screw (included with the auto switch), use a watchmaker's screwdriver with a handle diameter of 5 to 6 mm.
* Prepare an auto switch mounting bracket (BMY3-016) when mounting the auto switch on to the EQFS32/40H.

Solid State Auto Switch
Direct Mounting Type
D-M9N/D-M9P/D-M9B

Refer to the SMC website for details on products that are compliant with international standards.

Grommet

- **2-wire load current is reduced (2.5 to 40 mA).**
- **Using flexible cable as standard spec.**

Auto Switch Specifications

PLC: Programmable Logic Controller

D-M9□ (With indicator light)			
Auto switch model	**D-M9N**	**D-M9P**	**D-M9B**
Electrical entry direction	In-line		
Wiring type	3-wire		2-wire
Output type	NPN	PNP	—

2-Color Indicator Solid State Auto Switch
Direct Mounting Type
D-M9NW/D-M9PW/D-M9BW

Refer to the SMC website for details on products that are compliant with international standards.

Grommet

- **2-wire load current is reduced (2.5 to 40 mA).**
- **Using flexible cable as standard spec.**
- **The proper operating range can be determined by the color of the light. (Red → Green ← Red)**

⚠Caution

Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications

PLC: Programmable Logic Controller

D-M9□W (With indicator light)			
Auto switch model	**D-M9NW**	**D-M9PW**	**D-M9BW**
Electrical entry direction	In-line		
Wiring type	3-wire		2-wire
Output type	NPN	PNP	—
Applicable load	IC circuit, Relay, PLC		24 VDC relay, PLC
Power supply voltage	5, 12, 24 VDC (4.5 to 28 V)		—
Current consumption	10 mA or less		—
Load voltage	28 VDC or less	—	24 VDC (10 to 28 VDC)
Load current	40 mA or less		2.5 to 40 mA
Internal voltage drop	0.8 V or less at 10 mA (2 V or less at 40 mA)		4 V or less
Leakage current	100 μA or less at 24 VDC		0.8 mA or less
Indicator light	Operating range ····· Red LED illuminates. Proper operating range ····· Green LED illuminates.

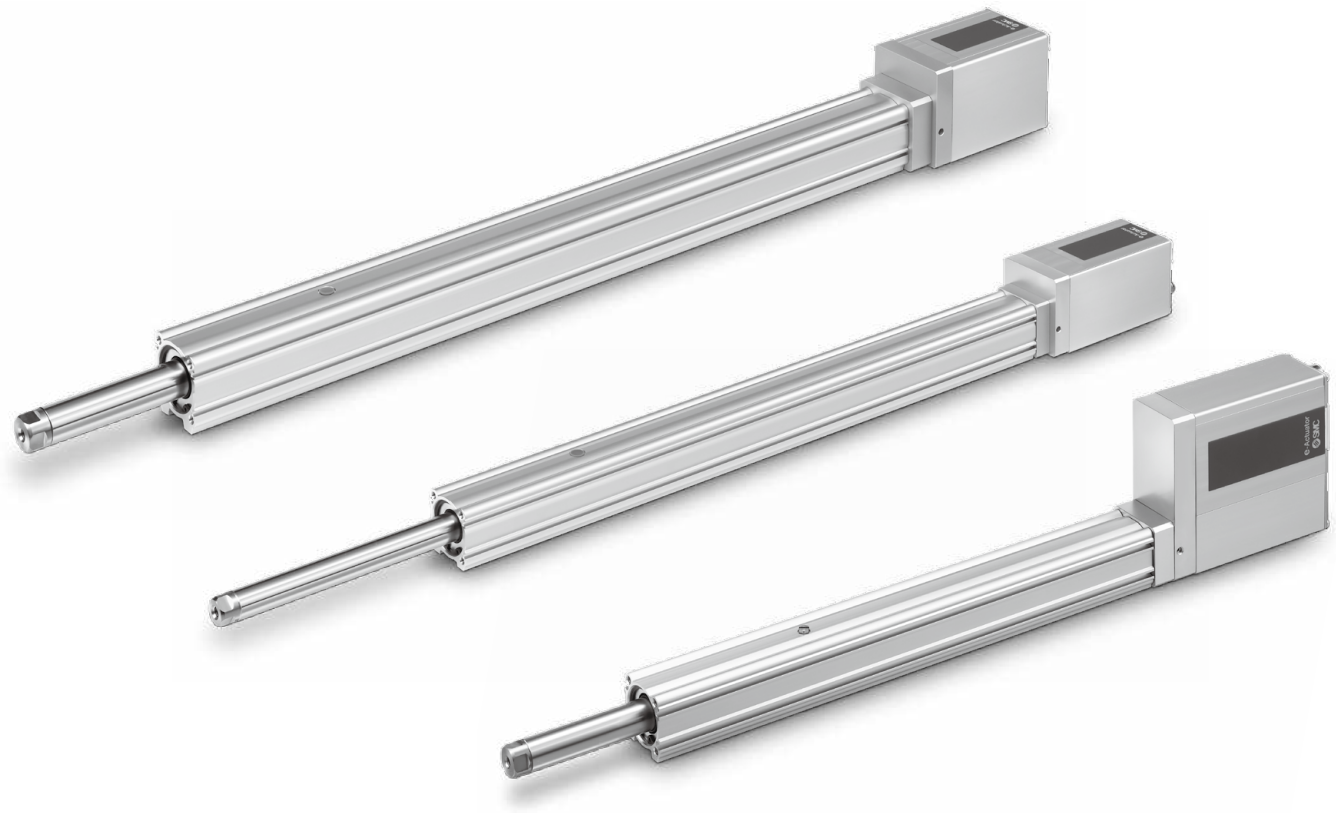
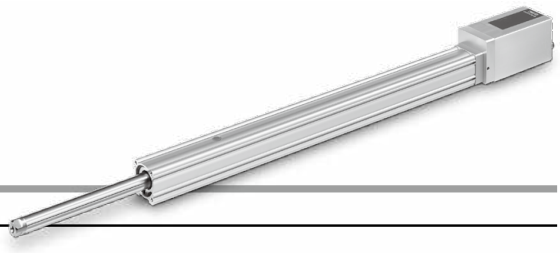
Battery-less Absolute (Step Motor 24 VDC)



Model Selection



Selection Procedure

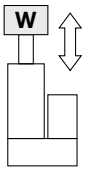
Positioning Control Selection Procedure

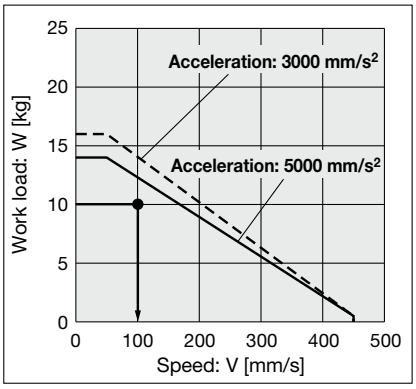
Step 1 Check the work load–speed. (Vertical transfer) → **Step 2** Check the cycle time.

Selection Example

Operating conditions

- Workpiece mass: 10 [kg]
- Speed: 100 [mm/s]
- Acceleration/Deceleration: 5000 [mm/s^2]
- Stroke: 200 [mm]
- Workpiece mounting condition: Vertical upward downward transfer





<Speed–Vertical work load graph> (EQY25HB/Step motor)

Step 1 **Check the work load–speed. <Speed–Vertical work load graph>**

Select a model based on the workpiece mass and speed while referencing the speed–vertical work load graph.

Selection example) The **EQY25DHB-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

* It is necessary to mount a guide outside the actuator when used for horizontal transfer. When selecting the target model, refer to the horizontal work load in the specifications on page 42 and the precautions.

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

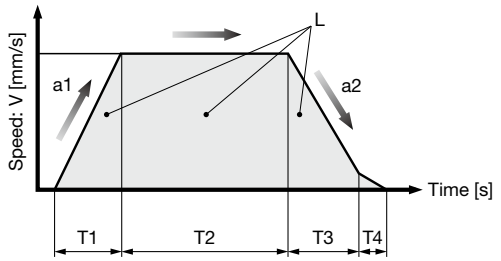
$$T1 = V/a1 \text{ [s]} \qquad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as actuator types, load, and in position of the step data.
  Reference value for settling time: 0.15 s or less
  The following value is used for this calculation.

$$T4 = 0.15 \text{ [s]}$$



L : Stroke [mm] ··· (Operating condition)
V : Speed [mm/s] ··· (Operating condition)
a1: Acceleration [mm/s^2] ··· (Operating condition)
a2: Deceleration [mm/s^2] ··· (Operating condition)

T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 100/5000 = 0.02 \text{ [s]}, \quad T3 = V/a2 = 100/5000 = 0.02 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 100 \cdot (0.02 + 0.02)}{100} = 1.98 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

The cycle time can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.02 + 1.98 + 0.02 + 0.15 = \mathbf{2.17 \text{ [s]}}$$

Based on the above calculation result, the EQY25HB-200 should be selected.

Selection Procedure

Pushing Control Selection Procedure

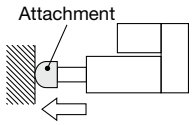
Step 1 Check the duty ratio. → **Step 2** Check the pushing force. → **Step 3** Check the lateral load on the rod end.

∗ The duty ratio is a ratio of the operation time in one cycle.

Selection Example

Operating conditions

- Mounting condition: Horizontal (pushing)
- Attachment weight: 0.2 [kg]
- Pushing force: 100 [N]
- Duty ratio: 15 [%]
- Speed: 100 [mm/s]
- Stroke: 200 [mm]



Step 1 **Check the duty ratio.**

<Conversion table of pushing force–duty ratio>

Select the [Pushing force] from the duty ratio while referencing the conversion table of pushing force–duty ratio.

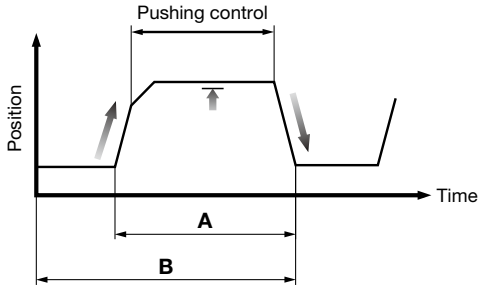
Selection example)
Based on the table below,
- Duty ratio: 15 [%]

The pushing force set value will be 50 [%].

<Conversion table of pushing force–duty ratio>
(EQY25/Battery-less absolute)

Ambient temperature	Pushing force set value [%]	Duty ratio [%]	Continuous pushing time [min]
40°C or less	50 or less	100	—

∗ [Pushing force set value] is one of the step data input to the controller.
∗ [Continuous pushing time] is the time that the actuator can continuously keep pushing.



Duty ratio = A/B x 100 [%]

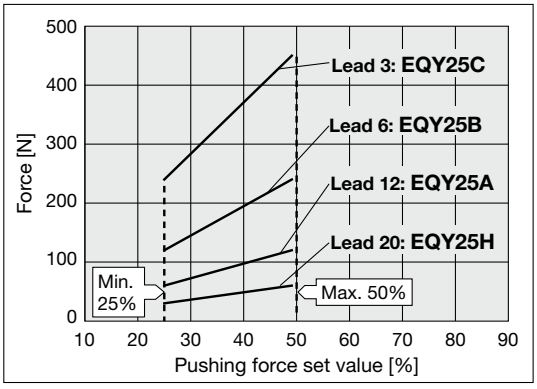
Step 2 **Check the pushing force.**

<Force conversion graph>

Select a model based on the pushing force set value and force while referencing the force conversion graph.

Selection example)
Based on the graph shown on the right side,
- Pushing force: 100 [N]
- Pushing force set value: 40 [%]

The **EQY25DHB** can be temporarily selected as a possible candidate.



<Force conversion graph>
(EQY25□H/Step motor)

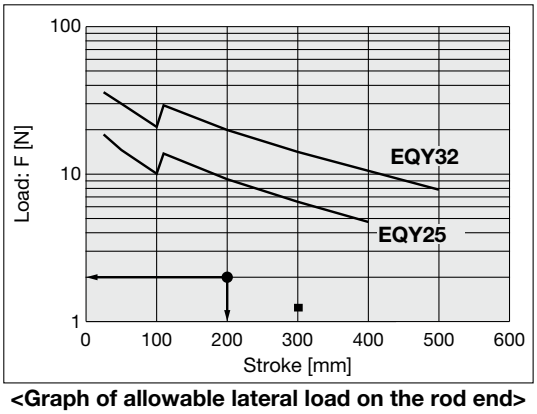
Step 3 **Check the lateral load on the rod end.**

<Graph of allowable lateral load on the rod end>

Confirm the allowable lateral load on the rod end of the actuator: EQY25, which has been selected temporarily while referencing the graph of allowable lateral load on the rod end.

Selection example)
Based on the graph shown on the right side,
- Attachment weight: 0.2 [kg] ≈ 2 [N]
- Product stroke: 200 [mm]

The lateral load on the rod end is in the allowable range.



<Graph of allowable lateral load on the rod end>

Based on the above calculation result, the EQY25DHB-200 should be selected.

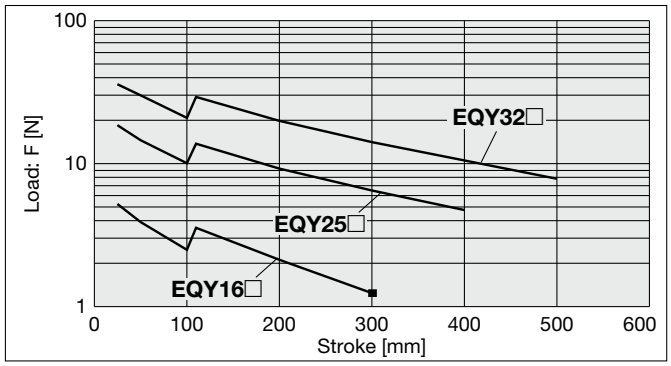
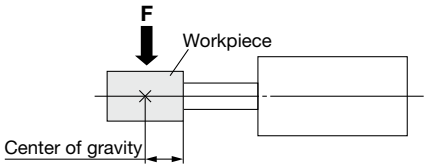
Graph of Allowable Lateral Load on the Rod End (Guide)

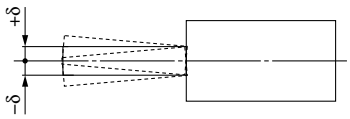


[Stroke] = [Product stroke] + [Distance from the rod end to the center of gravity of the workpiece]



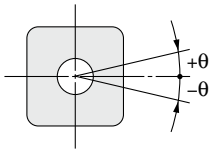
Rod Displacement: δ [mm]

Size \ Stroke	30	50	100	150	200	250	300	350	400	450	500
16	±0.4	±0.5	±0.9	±0.8	±1.1	±1.3	±1.5	—	—	—	—
25	±0.3	±0.4	±0.7	±0.7	±0.9	±1.1	±1.3	±1.5	±1.7	—	—
32	±0.3	±0.4	±0.7	±0.6	±0.8	±1.0	±1.1	±1.3	±1.5	±1.7	±1.8



∗ The values without a load are shown.

Non-rotating Accuracy of Rod



Size	Non-rotating accuracy θ
16	±1.1°
25	±0.8°
32	±0.7°

∗ Avoid using the electric actuator in such a way that rotational torque would be applied to the piston rod.
Failure to do so may result in the deformation of the non-rotating guide, abnormal auto switch responses, play in the internal guide, or an increase in the sliding resistance.

Force Conversion Graph (Guide)

*1 Horizontal: Please use an external guide (friction coefficient: 0.1 or less). The work load shows the maximum value. The actual work load and transfer speed change according to the condition of the external guide.
For the speed, acceleration, and duty ratio according to the work load, check the "Speed–Work Load Graph" in the catalog.
Vertical: If the rod orientation is vertical or radial load is applied to the rod, please use an external guide (friction coefficient: 0.1 or less). The work load represents the maximum value. The actual work load and transfer speed change according to the condition of the external guide.
For the speed, acceleration, and duty ratio according to the work load, check the "Speed–Work Load Graph" in the catalog.
The values shown in ( ) are the max. acceleration/deceleration.
Set the acceleration/deceleration speed to 10000 [mm/s²] or less for the horizontal direction and 5000 [mm/s²] or less for the vertical direction.
*2 Pushing force accuracy is ±20% (F.S.).
*3 The pushing force set values for EQY16□H are 25% to 45%, for EQY25□H are 25% to 50%, and for EQY32□H are 30% to 70%.
The pushing force values change according to the duty ratio and pushing speed. Check the "Force Conversion Graph" in the catalog.
*4 The speed and force may change depending on the cable length, load, and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)
*5 The allowable speed for pushing operation. When push conveying a workpiece, operate at the vertical work load or less.
*6 A reference value for correcting errors in reciprocal operation
*7 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
*8 Indicates the max. power during operation (including the controller). This value can be used for the selection of the power supply.
*9 For an actuator with lock, add the power for the lock.
*10 With lock only

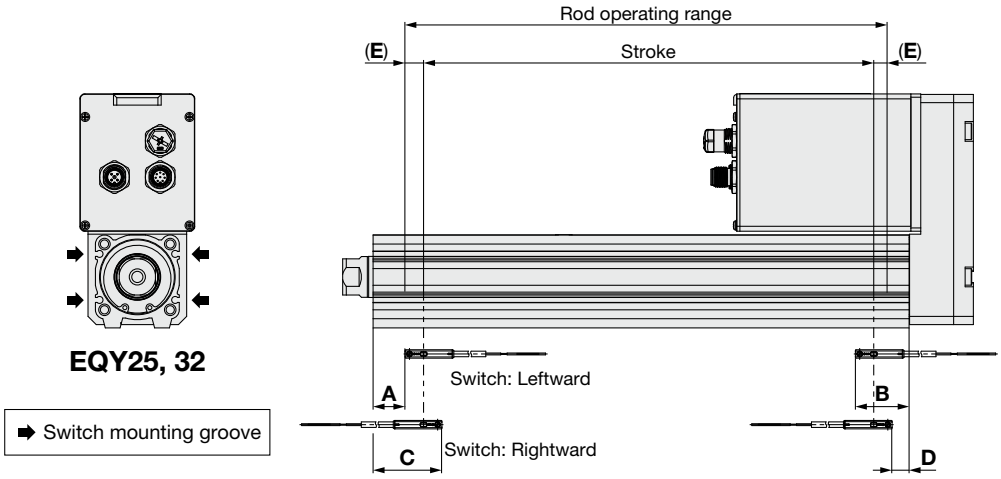
Auto Switch Mounting

Auto Switch Proper Mounting Position

Applicable auto switch: D-M9□(V), D-M9□E(V), D-M9□W(V), D-M9□A(V)

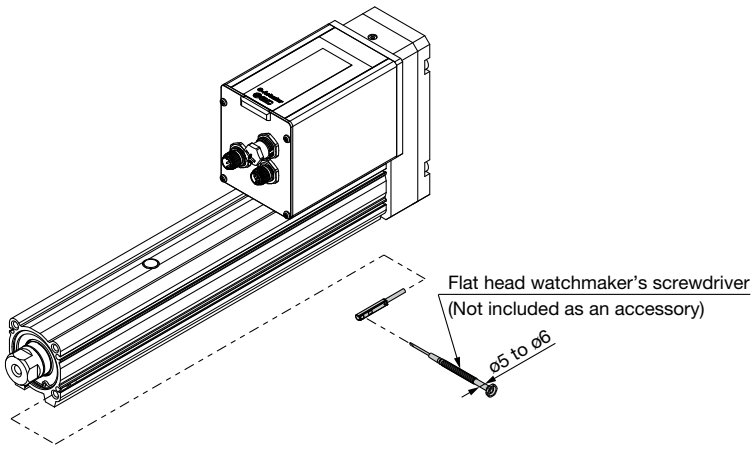


[mm]

Size	Stroke range	Auto switch position				Return to origin distance	Operating range
		Leftward mounting		Rightward mounting			
		A	B	C	D	E	—
16	30 to 100	21.5	46.5	33.5	34.5	(2)	2.9
	105 to 300	41.5		53.5			
25	30 to 100	27	62.5	39	50.5	(2)	4.2
	105 to 400	52		64			
32	30 to 100	30.5	65.5	42.5	53.5	(2)	4.9
	105 to 500	60.5		72.5			

* The values in the table above are to be used as a reference when mounting auto switches for stroke end detection. Adjust the auto switch after confirming the operating conditions in the actual setting.
* An auto switch cannot be mounted on the same side as a motor.
* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approx. ±30% dispersion). It may change substantially depending on the ambient environment.
* For the guide rod type (EQYG□H), auto switches cannot be mounted behind the guide attachment (in the bottom groove on the side of the rod that sticks out).

Auto Switch Mounting



Tightening Torque for Auto Switch Mounting Screw

[N·m]

Auto switch model	Tightening torque
D-M9□(V) **D-M9□E(V)** **D-M9□W(V)**	0.05 to 0.15
D-M9□A(V)	0.05 to 0.10

* When tightening the auto switch mounting screw (included with the auto switch), use a watchmaker's screwdriver with a handle diameter of 5 to 6 mm.

Solid State Auto Switch
Direct Mounting Type
D-M9N(V)/D-M9P(V)/D-M9B(V)

Refer to the SMC website for details on products that are compliant with international standards.

Grommet

- **2-wire load current is reduced (2.5 to 40 mA).**
- **Using flexible cable as standard spec.**

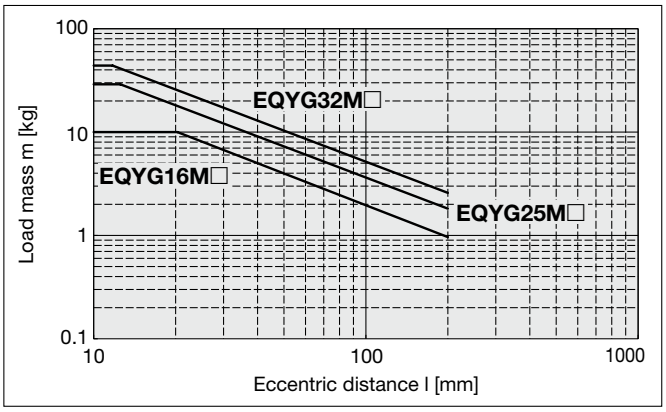
*1 For the sliding bearing type, the speed is restricted with a horizontal/moment load.

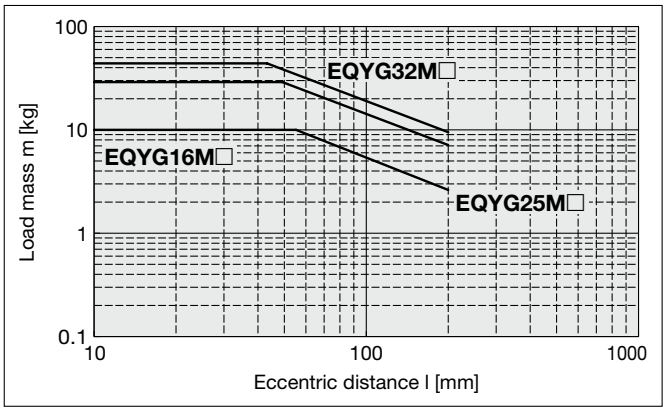
Vertical Mounting, Sliding Bearing

* The limit of vertical load mass varies depending on the lead and transfer speed. Check the "Speed–Work Load Graph."

① 70 mm stroke or less



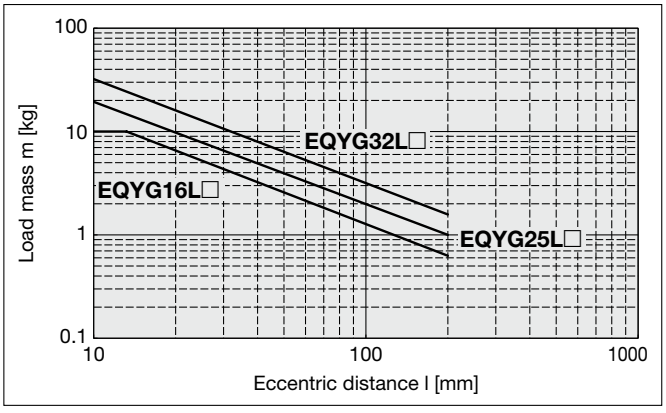
② Over 75 mm stroke



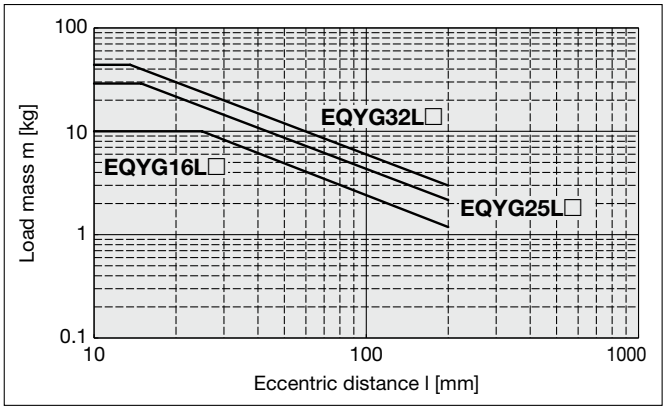
* The limit of vertical load mass varies depending on "lead" and "speed." Check the "Speed–Work Load Graph" on pages 59 to 64.

Vertical Mounting, Ball Bushing Bearing

③ 35 mm stroke or less



④ Over 40 mm stroke

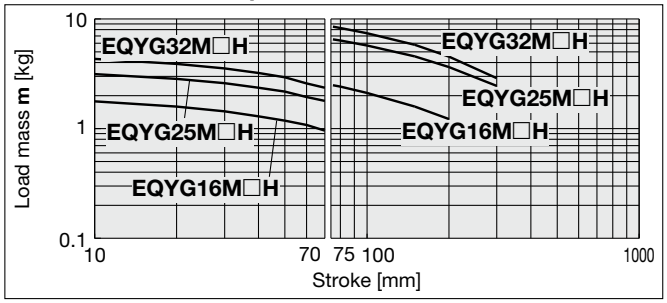


* The limit of vertical load mass varies depending on "lead" and "speed." Check the "Speed–Work Load Graph" on pages 59 to 64.

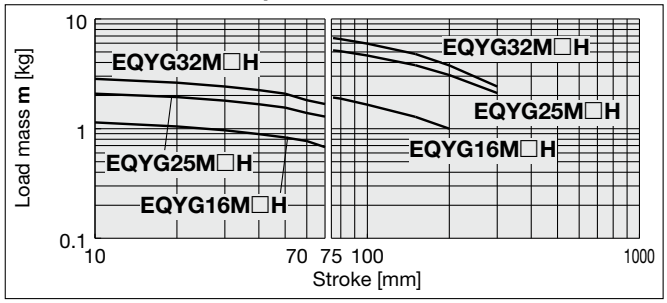
Moment Load Graph

Horizontal Mounting, Sliding Bearing

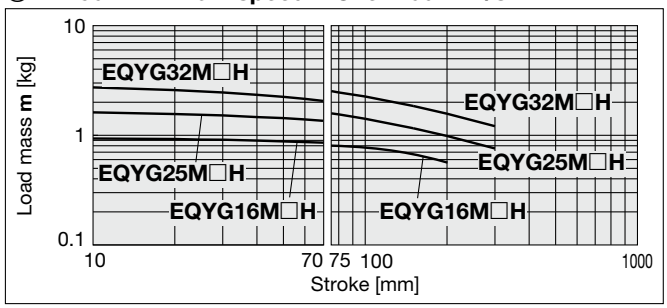
⑤ L = 50 mm Max. speed = 200 mm/s or less



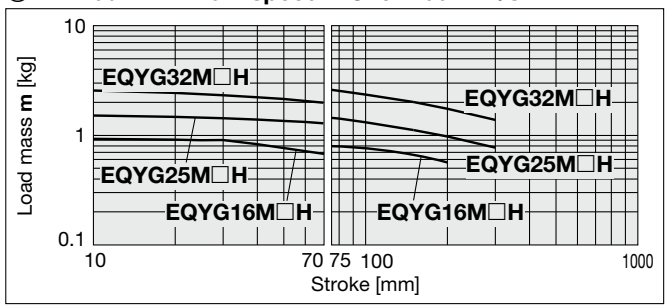
⑥ L = 100 mm Max. speed = 200 mm/s or less



⑦ L = 50 mm Max. speed = Over 200 mm/s

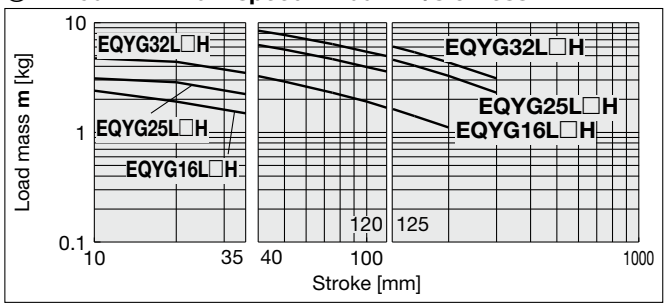


⑧ L = 100 mm Max. speed = Over 200 mm/s

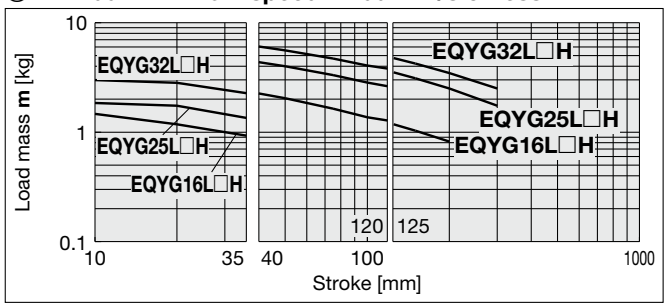


Horizontal Mounting, Ball Bushing Bearing

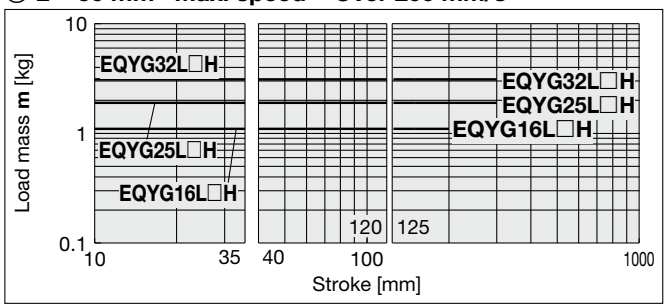
⑨ L = 50 mm Max. speed = 200 mm/s or less



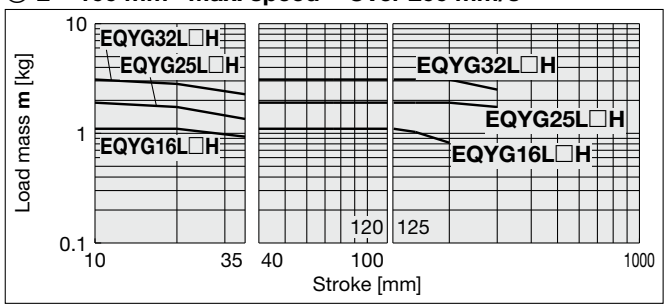
⑩ L = 100 mm Max. speed = 200 mm/s or less



⑪ L = 50 mm Max. speed = Over 200 mm/s

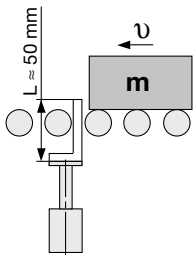


⑫ L = 100 mm Max. speed = Over 200 mm/s



Operating Range when Used as a Stopper

EQYG□M (Sliding bearing)



⚠Caution

Handling Precautions

* When used as a stopper, select a model with a stroke of 30 mm or less.
* EQYG□L (ball bushing bearing) cannot be used as a stopper.
* Workpiece collision in series with guide rod cannot be permitted (**Fig. a**).
* The body should not be mounted on the end. It must be mounted on the top or bottom (**Fig. b**).

A	10	12	16
B	5	6	8
C	2.5	3	4

❻ Stroke [mm]

30	30
to	to
300	300

* For details, refer to the applicable stroke table below.

❼ Motor option

Nil	Without option
B	With lock

❽ Controller position

B	Integrated controller

❾ Parallel input

5	NPN
6	PNP

Applicable Stroke Table

Size	Stroke [mm]							
	30	50	100	150	200	250	300	Manufacturable stroke range
16	●	●	●	●	●	—	—	10 to 200
25	●	●	●	●	●	●	●	15 to 300
32	●	●	●	●	●	●	●	20 to 300

*1 Motor mounting position: For the parallel mounting type, the motor units with the following sizes and strokes protrude from the body end. Check for interference with workpieces before selecting a model.
- EQYG16 Without lock: 30 mm stroke, With lock: 30, 50 mm strokes
- EQYG25 Without lock: 30 mm stroke, With lock: 30, 50 mm strokes
- EQYG32 Without lock: 30 mm stroke, With lock: 30, 50 mm strokes

*2 There is a limit for mounting size 25/32 top side parallel motor types and strokes of 100 mm or less.

For details on auto switches, refer to pages 51 to 54.

Use of auto switches for the guide rod type/EQYG
- **Auto switches must be inserted from the front side with the rod (plate) sticking out.**
- **Auto switches cannot be mounted behind the guide attachment (in the bottom groove on the side of the rod that sticks out).**
- **Contact SMC when mounting an auto switch in the bottom groove on the side of the rod that sticks out is required, as this is only available as a special order.**

	Encoder		Battery-less absolute encoder										
	Power supply voltage [V]		24 VDC ±10%										
	Power [W]*8 *9		Max. power 82			Max. power 86				Max. power 109			
Lock unit specifications	Type*10		Non-magnetizing lock										
	Holding force [N]		25	54	98	10	69	147	284	10	108	235	431
	Power [W]*9		2.9			5				5			
	Rated voltage [V]		24 VDC ±10%										

*1 Horizontal: Please use an external guide (friction coefficient: 0.1 or less). The work load shows the maximum value. The actual work load and transfer speed change according to the condition of the external guide.
For the speed, acceleration, and duty ratio according to the work load, check the "Speed–Work Load Graph" in the catalog.
Vertical: If the rod orientation is vertical or radial load is applied to the rod, please use an external guide (friction coefficient: 0.1 or less). The work load represents the maximum value. The actual work load and transfer speed change according to the condition of the external guide.
For the speed, acceleration, and duty ratio according to the work load, check the "Speed–Work Load Graph" in the catalog.
The values shown in ( ) are the max. acceleration/deceleration.
Set the acceleration/deceleration speed to 10000 [mm/s^2] or less for the horizontal direction and 5000 [mm/s^2] or less for the vertical direction.

*2 Pushing force accuracy is ±20% (F.S.).

*3 The pushing force set values for EQYG16□H are 25% to 45%, for EQYG25□H are 25% to 50%, and for EQYG32□H are 30% to 70%.
The pushing force values change according to the duty ratio and pushing speed. Check the "Force Conversion Graph" on page 66.

*4 The speed and force may change depending on the cable length, load, and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)

*5 The allowable speed for pushing operation. When push conveying a workpiece, operate at the vertical work load or less.

*6 A reference value for correcting errors in reciprocal operation

*7 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*8 Indicates the max. power during operation (including the controller). This value can be used for the selection of the power supply.

*9 For an actuator with lock, add the power for the lock.

*10 With lock only

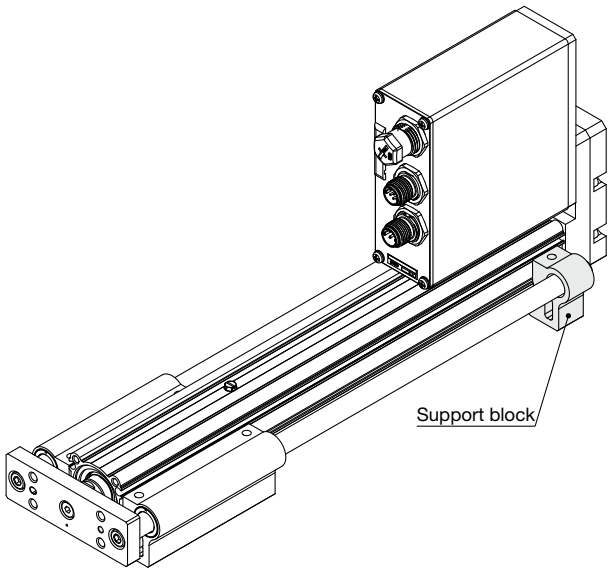
Support Block

● Guide for support block application

When the stroke exceeds 100 mm and the mounting orientation is horizontal, the body will be bent. Mounting the support block is recommended. (Please order it separately from the models shown below.)

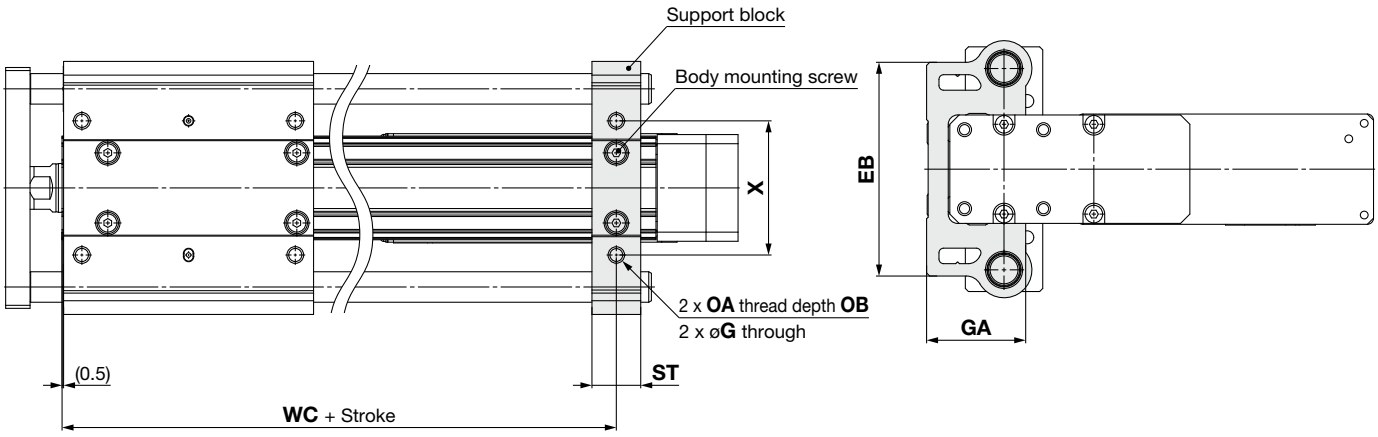


Support Block Model

LEYG-S016

● **Size**

016	For size 16
025	For size 25
032	For size 32



⚠Caution

Do not install the body using only a support block.
The support block should be used only for support.

[mm]

Size	Model	Stroke range	EB	G	GA	OA	OB	ST	WC	X
16	**LEYG-S016**	Up to 100	69	4.3	31.8	M5 x 0.8	10	16	55	44
		105 to 200							75	
25	**LEYG-S025**	Up to 100	85	5.4	40.3	M6 x 1.0	12	20	70	54
		105 to 300							95	
32	**LEYG-S032**	Up to 100	101	(5.4)	(50.3)	M6 x 1.0	12	22	75	64
		105 to 300							105	

∗ Two body mounting screws are included with the support block.
∗ The through holes of the LEYG-S025 and LEYG-S032 cannot be used for the top side parallel motor type. Use taps on the bottom.

e-Actuator Electric Specifications

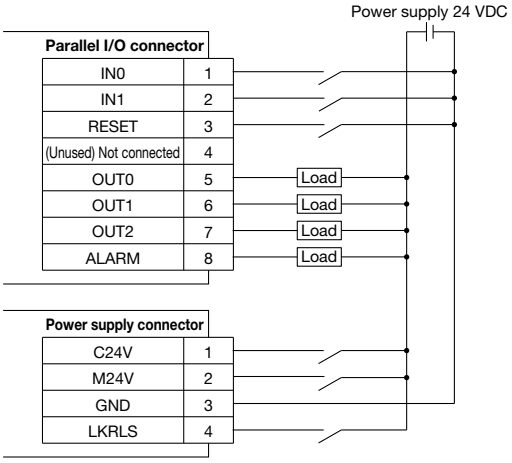
Compatible motor		Step motor 24 VDC
Power supply		24 VDC ±10%
Compatible encoder		Battery-less absolute
Parallel input specifications	**Number of inputs**	3 inputs (Non-insulated)
	Input voltage	24 VDC ±10%
	Input current	5 mA/circuit
Parallel output specifications	**Number of outputs**	4 outputs (Non-insulated)
	Load voltage	24 VDC ±10%
	Max. load current	40 mA/point
LED		PWR (Green), ALM (Red), OVL (Orange)

The initial setting of the e-Actuator at the time of shipment from the factory is the closed center mode.
To switch the setting to single or double solenoid mode, switch the mode by using the e-Actuator setup software.

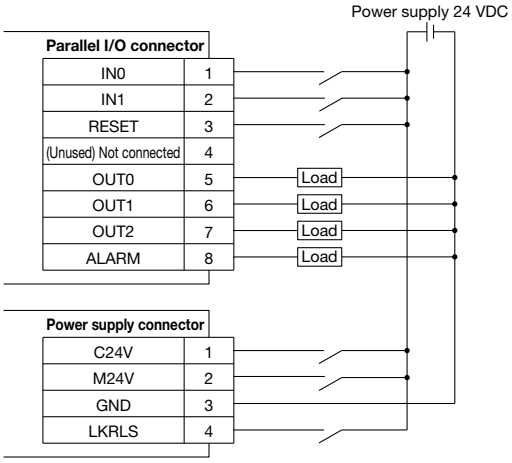
Wiring Examples

* The wiring examples are shown below. Refer to the EQFS/EQY/EQYG operation manual for details.
* Use the I/O cable (JX-CI□-E-□-S) for connecting a PLC with the parallel I/O connector.
* Wiring depends on the parallel input/output type (NPN or PNP).
* The parallel I/O is of non-insulated specification.
  The ground connection of the connected PLC and other equipment uses a common GND with the GND of the power supply connector.

Wiring diagram (NPN)



Wiring diagram (PNP)



Input Signal

Name	Details
IN0*1	Movement signal for origin end
IN1*1	Movement signal for opposite end
RESET	Reset alarms

*1 In single solenoid mode, turning ON of IN1 input gives an opposite end operation instruction, turning OFF of IN1 input gives an origin end operation instruction, and IN0 is not used.

Output Signal

Name	Details
OUT0	Origin end position detection
OUT1	Opposite end position detection
OUT2	Midpoint position detection
*ALARM*1	OFF when alarm is generated

*1 Signal of negative-logic circuit

* Check the catalog and operation manual of each actuator model which is capable of performing pushing operations.
  The “Specifications” table for models which are capable of performing pushing operations includes an item for the pushing force.

Options

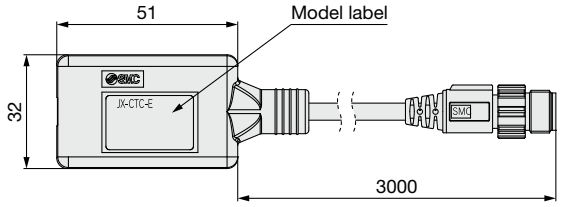
■ Communication cable for controller setting

Controller setting kit JX-CT-E

A set which includes a communication cable (JX-CTC-E) and a USB cable (LEC-W2-U)

* It is possible to individually purchase the communication cable and USB cable.

Communication cable JX-CTC-E



USB cable LEC-W2-U

CE/UKCA/UL-compliance List

* For CE, UKCA, and UL-compliant products, refer to the table below.

As of September 2024

■Compliance List "○": Compliant "×": Not applicable "—": No setting

Series	CE UKCA	cULus	
		Compliance	Certification No. (File No.)
EQFS	○	○*1	E339743
EQY	○	○*1	E339743
EQYG	○	×	—

*1 Size 16 is not applicable.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

*1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components
ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components
IEC 60204-1: Safety of machinery - Electrical equipment of machines - Part 1: General requirements
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1:Robots
etc.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. SMC products cannot be used beyond their specifications. They are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not allowed.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, combustion equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

⚠ Caution

SMC develops, designs, and manufactures products to be used for automatic control equipment, and provides them for peaceful use in manufacturing industries.
Use in non-manufacturing industries is not allowed.
Products SMC manufactures and sells cannot be used for the purpose of transactions or certification specified in the Measurement Act of each country. The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not allowed by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Revision History

Edition B
* EQFS16H and EQY16H have been added.
* Errors in text have been corrected.
* The number of pages has been increased from 60 to 68.

Edition C
* A guide rod type (EQYG□H series) has been added.
* The number of pages has been increased from 68 to 84.

⚠ Safety Instructions	Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
