LESYH Series

SMC

Battery-less Absolute Encoder Type

Restart from the last stop position is possible after recovery of the power supply.

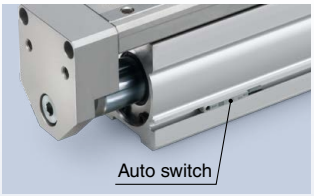
The position information is held by the encoder even when the power supply is turned off. A return to origin operation is not necessary when the power supply is recovered.

■ Auto switches are mountable.

Mounting groove for auto switches

For checking the limit and the intermediate signal
Applicable to the D-M9□, D-M9□E, and D-M9□W (2-color indicator)

* The auto switches should be ordered separately. Refer to the **Web Catalog** for details.



2-color indicator solid state auto switch
Accurate setting of the mounting position can be performed without mistakes.

A green light lights up within the optimum operating range.

LESYH□E Series

Model Selection

Selection Procedure

Positioning Control Selection Procedure

Step 1 Check the work load–speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

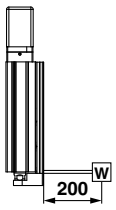
Step 1 **Check the work load–speed. <Speed–Work load graph>** (page 4)

Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

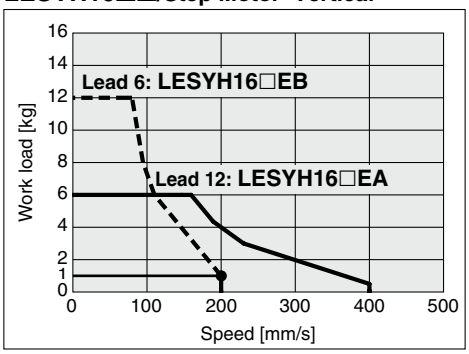
Selection example) The **LESYH16□EB-50** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Operating conditions

- Workpiece mass: 1 [kg]
- Speed: 200 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 3000 [mm/s²]
- Cycle time: 0.5 s
- Workpiece mounting condition:



LESYH16□□/Step Motor Vertical



<Speed–Work load graph>

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$T = T1 + T2 + T3 + T4$ [s]

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

  $T1 = V/a1$ [s] $T3 = V/a2$ [s]

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load, and in position of the step data. Therefore, calculate the settling time while referencing the following value.

  $T4 = 0.15$ [s]

Calculation example)
T1 to T4 can be calculated as follows.

$T1 = V/a1 = 200/3000 = 0.07$ [s],

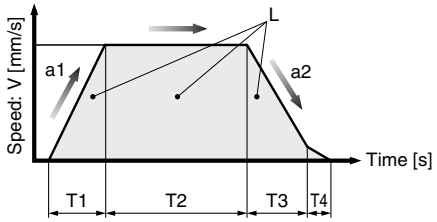
$T3 = V/a2 = 200/3000 = 0.07$ [s]

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 200 \cdot (0.07 + 0.07)}{200} = 0.18 \text{ [s]}$$

$T4 = 0.15$ [s]

The cycle time can be found as follows.

$T = T1 + T2 + T3 + T4$
$= 0.07 + 0.18 + 0.07 + 0.15$
$=$ **0.47 [s]**

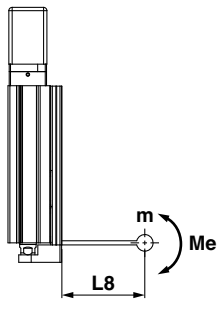


L : Stroke [mm] ····· (Operating condition)
V : Speed [mm/s] ····· (Operating condition)
a1: Acceleration [mm/s²] ··· (Operating condition)
a2: Deceleration [mm/s²] ··· (Operating condition)

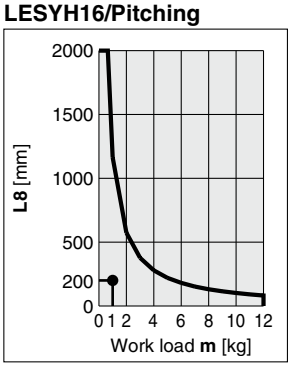
T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Step 3 **Check the allowable moment.**
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□EB-50 should be selected.

Selection Procedure

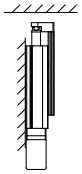
Pushing Control Selection Procedure

Step 1 Check the required force. → **Step 2** Check the pushing force. → **Step 3** Check the duty ratio. → **Step 4** Check the allowable moment.

Selection Example

Operating conditions

- Pushing force: 150 N
- Workpiece mass: 1 kg
- Speed: 100 mm/s
- Stroke: 100 mm
- Mounting position: Vertical upward
- Pushing time + Operation (A): 1.5 s
- Full cycle time (B): 10 s



Step 1 **Check the required force.**

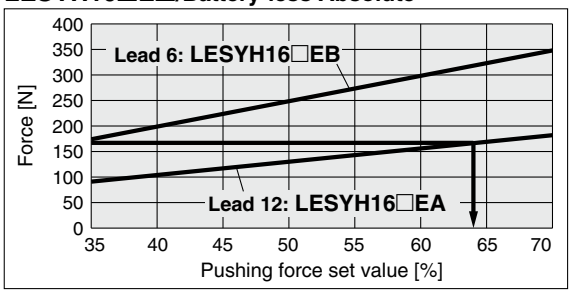
Calculate the approximate required force for a pushing operation.
Selection example) ● Pushing force: 150 [N]
● Workpiece mass: 1 [kg]
The approximate required force can be found to be 150 + 10 = 160 [N].
Select a model based on the approximate required force while referencing the specifications (page 27).
Selection example based on the specifications)
● Approximate required force: 160 [N]
● Speed: 100 [mm/s]
The **LESYH16□EA** can be temporarily selected as a possible candidate.
Then, calculate the required force for a pushing operation. If the mounting position is vertical upward, add the actuator table weight.
Selection example based on the table weight)
● **LESYH16□EA** table weight: 0.7 [kg]
The required force can be found to be 160 + 7 = 167 [N].

Table Weight Unit [kg]

Model	Stroke [mm]			
	50	75	100	150
LESYH8	0.2	0.3	—	—
LESYH16	0.4	—	0.7	—
LESYH25	0.9	—	1.3	1.7

∗ If the mounting position is vertical upward, add the table weight.

LESYH16□E□/Battery-less Absolute



<Pushing force set value–Force graph>

Step 2 **Check the pushing force.**
<Pushing force set value–Force graph> (page 5)

Select a model based on the required force while referencing the pushing force set value–force graph, and confirm the pushing force set value.
Selection example based on the graph shown on the right side)
● Required force: 167 [N]
The **LESYH16□EA** can be temporarily selected as a possible candidate.
The pushing force set value is 64 [%].

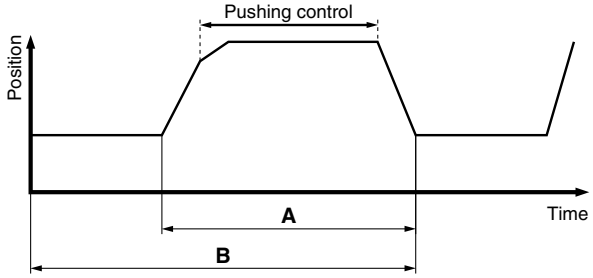
Allowable Duty Ratio

Step Motor (Servo 24 VDC)

Pushing force set value [%]	Duty ratio [%]	Continuous pushing time [min]
35	—	—
50 or less	30 or less	5 or less
70 or less	20 or less	3 or less

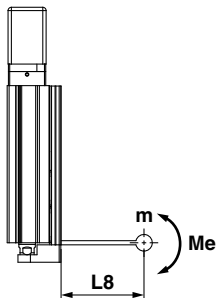
Step 3 **Check the duty ratio.**

Confirm the allowable duty ratio based on the pushing force set value while referencing the allowable duty ratio.
Selection example based on the allowable duty ratio)
● Pushing force set value: 64 [%]
The allowable duty ratio can be found to be 20 [%].
Calculate the duty ratio for the operating conditions, and confirm it does not exceed the allowable duty ratio.
Selection example) ● Pushing time + Operation (A): 1.5 s
● Full cycle time (B): 10 s
The duty ratio can be found to be 1.5/10 x 100 = 15 [%], and this is within the allowable range.

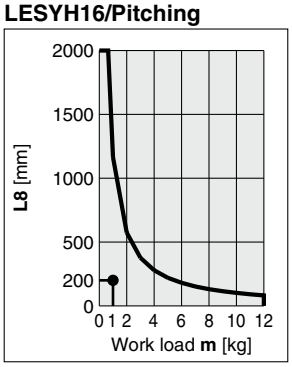


Step 4 **Check the allowable moment.**
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□EA-100 should be selected.

Dynamic Allowable Moment

* This graph shows the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation.

Acceleration/Deceleration —— 5000 mm/s²

Orientation	Load overhanging direction **m**: Work load [kg] **Me**: Allowable moment [N·m] **L**: Overhang to the work load center of gravity [mm]		Model LESYH8	Model LESYH16	Model LESYH25
Horizontal/Bottom		X					Y					Z			Horizontal (Wall)		X					Y					Z			
Dynamic Allowable Moment

∗ This graph shows the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation.

Acceleration/Deceleration —— 5000 mm/s²

Orientation	Load overhanging direction **m**: Work load [kg] **Me**: Allowable moment [N·m] **L**: Overhang to the work load center of gravity [mm]		Model: LESYH8	Model: LESYH16	Model: LESYH25
Vertical		Y					Z			
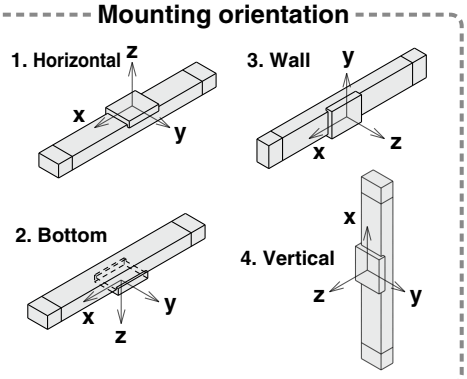
Calculation of Guide Load Factor

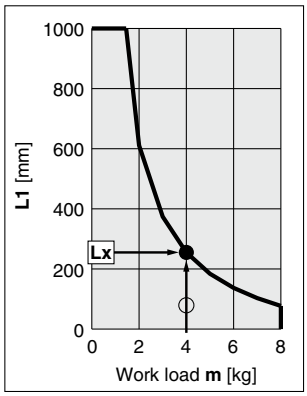
1. Decide operating conditions.
   Model: LESYH
   Size: 16
   Mounting orientation: Horizontal/Bottom/Wall/Vertical
   Acceleration [mm/s²]: **a**
   Work load [kg]: **m**
   Work load center position [mm]: **Xc/Yc/Zc**
2. Select the target graph while referencing the model, size, and mounting orientation.
3. Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.
4. Calculate the load factor for each direction.
   $\alpha x = Xc/Lx$, $\alpha y = Yc/Ly$, $\alpha z = Zc/Lz$
5. Confirm the total of αx, αy, and αz is 1 or less.
   $\alpha x + \alpha y + \alpha z \leq 1$
   When 1 is exceeded, consider a reduction of acceleration and work load, or a change of the work load center position and series.

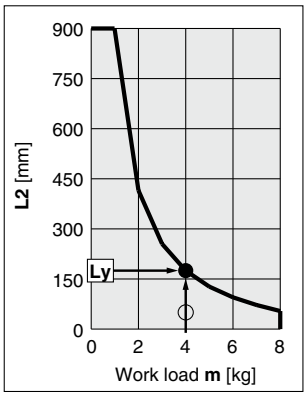
Mounting orientation

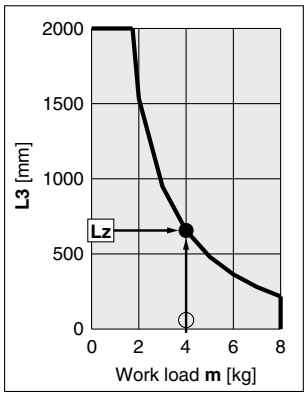


Example

1. Operating conditions
   Model: LESYH
   Size: 16
   Mounting orientation: Horizontal
   Acceleration [mm/s²]: 5000
   Work load [kg]: 4.0
   Work load center position [mm]: **Xc = 80**, **Yc = 50**, **Zc = 60**
2. Select three graphs from the top of the second row on page 6.
3. **Lx = 250 mm**, **Ly = 160 mm**, **Lz = 700 mm**
4. The load factor for each direction can be found as follows.
   $\alpha x = 80/250 = 0.32$
   $\alpha y = 50/160 = 0.32$
   $\alpha z = 60/700 = 0.09$
5. $\alpha x + \alpha y + \alpha z = 0.73 \leq 1$







Model Selection

Selection Procedure

Positioning Control Selection Procedure

Step 1 Check the work load–speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

Step 1 **Check the work load–speed. <Speed–Work load graph>** (page 10)

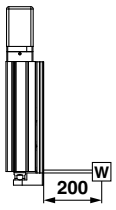
Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

Selection example) The **LESYH16□B-50** can be temporarily selected as a possible candidate based on the graph shown on the right side.

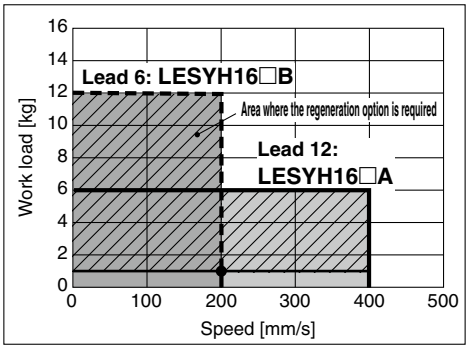
The regeneration option may be necessary. Refer to page 10 for the "Required Conditions for the Regeneration Option."

Operating conditions

- Workpiece mass: 1 [kg]
- Speed: 200 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 3000 [mm/s^2]
- Cycle time: 0.5 s
- Workpiece mounting condition:



LESYH16□□/AC Servo Motor Vertical



<Speed–Work load graph>

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$T = T1 + T2 + T3 + T4$ [s]

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

  $T1 = V/a1$ [s] $T3 = V/a2$ [s]

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load, and in position of the step data. Therefore, calculate the settling time while referencing the following value.

  $T4 = 0.15$ [s]

Calculation example)

T1 to T4 can be calculated as follows.

$T1 = V/a1 = 200/3000 = 0.07$ [s],

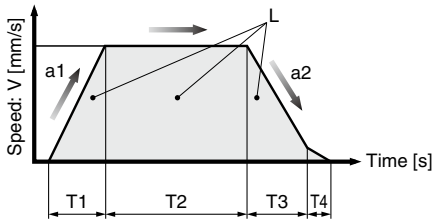
$T3 = V/a2 = 200/3000 = 0.07$ [s]

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 200 \cdot (0.07 + 0.07)}{200} = 0.18 \text{ [s]}$$

$T4 = 0.15$ [s]

The cycle time can be found as follows.

$T = T1 + T2 + T3 + T4$
$= 0.07 + 0.18 + 0.07 + 0.15$
$=$ **0.47 [s]**

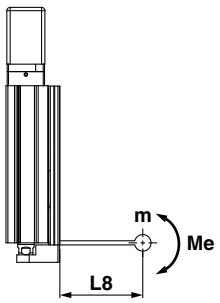


L : Stroke [mm] ····· (Operating condition)
V : Speed [mm/s] ····· (Operating condition)
a1: Acceleration [mm/s^2] ··· (Operating condition)
a2: Deceleration [mm/s^2] ··· (Operating condition)

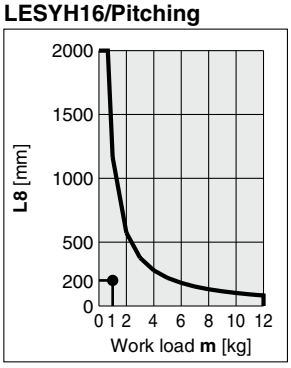
T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Step 3 **Check the allowable moment.**
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□B-50 should be selected.

Selection Procedure

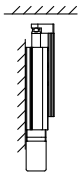
Force Control Selection Procedure

Step 1 Check the required force. → **Step 2** Check the pushing force. → **Step 3** Check the duty ratio. → **Step 4** Check the allowable moment.

Selection Example

Operating conditions

- Pushing force: 210 N
- Workpiece mass: 1 kg
- Speed: 100 mm/s
- Stroke: 100 mm
- Mounting position: Vertical upward
- Pushing time + Operation (A): 5 s
- Full cycle time (B): 10 s



Step 1 Check the required force.

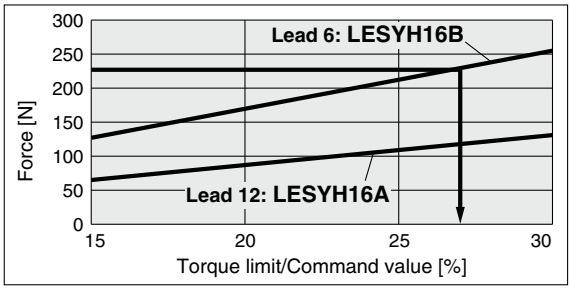
Calculate the approximate required force for a pushing operation.
Selection example) ● Pushing force: 210 [N]
● Workpiece mass: 1 [kg]
The approximate required force can be found to be 210 + 10 = 220 [N].
Select a model based on the approximate required force while referencing the specifications (pages 33, 34).
Selection example based on the specifications)
● Approximate required force: 220 [N]
● Speed: 100 [mm/s]
The **LESYH16□B** can be temporarily selected as a possible candidate.
Then, calculate the required force for a pushing operation. If the mounting position is vertical upward, add the actuator table weight.
Selection example based on the table weight)
● **LESYH16□B** table weight: 0.7 [kg]
The required force can be found to be 220 + 7 = 227 [N].

Table Weight Unit [kg]

Model	Stroke [mm]		
	50	100	150
LESYH16	0.4	0.7	—
LESYH25	0.9	1.3	1.7

∗ If the mounting position is vertical upward, add the table weight.

LESYH16



<Force conversion graph>

Step 2 Check the pushing force.
<Force conversion graph>

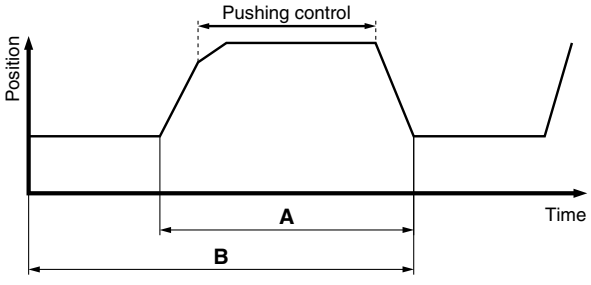
Select a model based on the required force while referencing the force conversion graph, and confirm the torque limit/command value.
Selection example) Based on the graph shown on the right side,
● Required force: 227 [N]
The **LESYH16□B** can be temporarily selected as a possible candidate.
The torque limit/command value is 27 [%].

Allowable Duty Ratio
LESYH16/AC Servo Motor

Torque limit/Command value [%]	Duty ratio [%]	Continuous pushing time [min]
25 or less	100	—
30	60	1.5

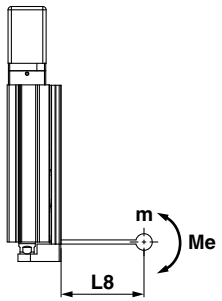
Step 3 Check the duty ratio.

Confirm the allowable duty ratio based on the torque limit/command value while referencing the allowable duty ratio.
Selection example based on the allowable duty ratio)
● Torque limit/Command value: 27 [%]
The allowable duty ratio can be found to be 60 [%].
Calculate the duty ratio for the operating conditions, and confirm it does not exceed the allowable duty ratio.
Selection example) ● Pushing time + Operation (A): 5 s
● Full cycle time (B): 10 s
The duty ratio can be found to be 5/10 x 100 = 50 [%], and this is within the allowable range.

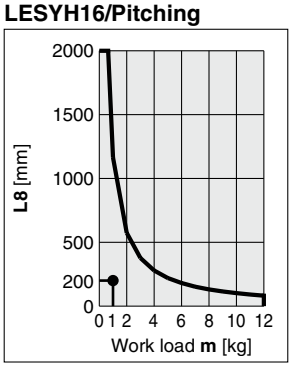


Step 4 Check the allowable moment.
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□B-100 should be selected.

Model Selection

Selection Procedure

Positioning Control Selection Procedure

Step 1 Check the work load–speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

Step 1 **Check the work load–speed. <Speed–Work load graph>** (page 15)

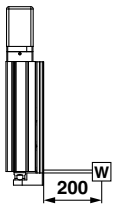
Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

Selection example) The **LESYH16□B-50** can be temporarily selected as a possible candidate based on the graph shown on the right side.

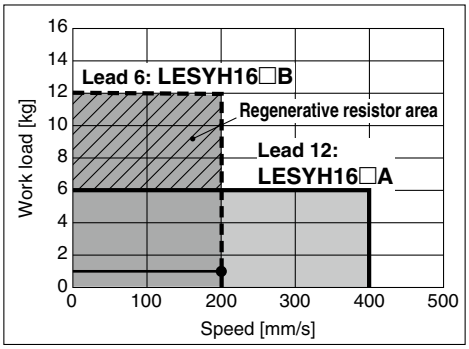
The regenerative resistor may be necessary. Refer to page 15 for the "Required Conditions for the Regenerative Resistor (Guide)."

Operating conditions

- Workpiece mass: 1 [kg]
- Speed: 200 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 3000 [mm/s²]
- Cycle time: 0.5 s
- Workpiece mounting condition:



LESYH16□□/AC Servo Motor Vertical



<Speed–Work load graph>

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:
T can be found from the following equation.

$T = T1 + T2 + T3 + T4$ [s]

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$T1 = V/a1$ [s] $T3 = V/a2$ [s]

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load, and in position of the step data. Therefore, calculate the settling time while referencing the following value.

$T4 = 0.15$ [s]

Calculation example)
T1 to T4 can be calculated as follows.

$T1 = V/a1 = 200/3000 = 0.07$ [s],

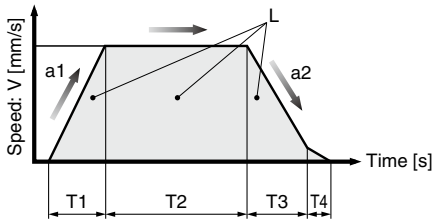
$T3 = V/a2 = 200/3000 = 0.07$ [s]

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 200 \cdot (0.07 + 0.07)}{200} = 0.18 \text{ [s]}$$

$T4 = 0.15$ [s]

The cycle time can be found as follows.

$T = T1 + T2 + T3 + T4$
$= 0.07 + 0.18 + 0.07 + 0.15$
$=$ **0.47 [s]**

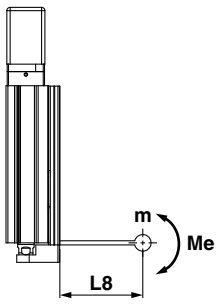


L : Stroke [mm] ····· (Operating condition)
V : Speed [mm/s] ····· (Operating condition)
a1: Acceleration [mm/s²] ··· (Operating condition)
a2: Deceleration [mm/s²] ··· (Operating condition)

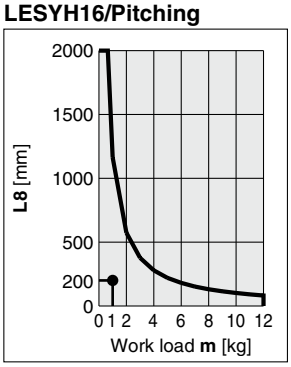
T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Step 3 **Check the allowable moment.**
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□B-50 should be selected.

Selection Procedure

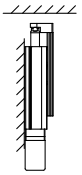
Force Control Selection Procedure

Step 1 Check the required force. → **Step 2** Check the pushing force. → **Step 3** Check the duty ratio. → **Step 4** Check the allowable moment.

Selection Example

Operating conditions

- Pushing force: 210 N
- Workpiece mass: 1 kg
- Speed: 100 mm/s
- Stroke: 100 mm
- Mounting position: Vertical upward
- Pushing time + Operation (A): 5 s
- Full cycle time (B): 10 s



Step 1 Check the required force.

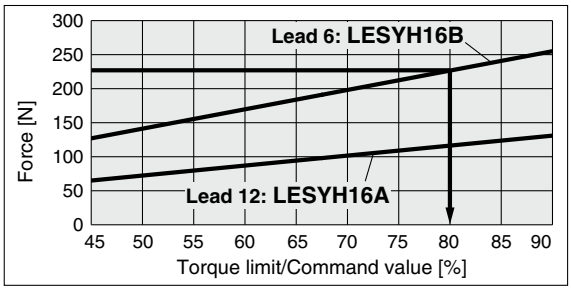
Calculate the approximate required force for a pushing operation.
Selection example) ● Pushing force: 210 [N]
● Workpiece mass: 1 [kg]
The approximate required force can be found to be 210 + 10 = 220 [N].
Select a model based on the approximate required force while referencing the specifications (page 39).
Selection example based on the specifications)
● Approximate required force: 220 [N]
● Speed: 100 [mm/s]
The **LESYH16□B** can be temporarily selected as a possible candidate.
Then, calculate the required force for a pushing operation. If the mounting position is vertical upward, add the actuator table weight.
Selection example based on the table weight)
● **LESYH16□B** table weight: 0.7 [kg]
The required force can be found to be 220 + 7 = 227 [N].

Table Weight Unit [kg]

Model	Stroke [mm]		
	50	100	150
LESYH16	0.4	0.7	—
LESYH25	0.9	1.3	1.7

∗ If the mounting position is vertical upward, add the table weight.

LESYH16



<Force conversion graph>

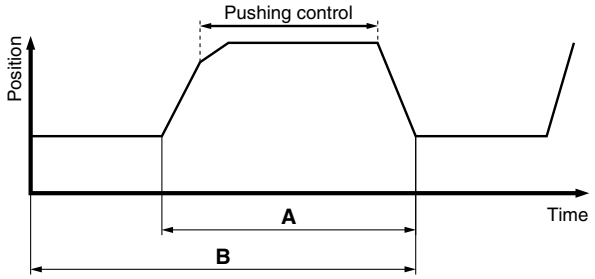
Step 2 Check the pushing force.
<Force conversion graph>

Select a model based on the required force while referencing the force conversion graph, and confirm the torque limit/command value.
Selection example) Based on the graph shown on the right side,
● Required force: 227 [N]
The **LESYH16□B** can be temporarily selected as a possible candidate.
The torque limit/command value is 80 [%].

Allowable Duty Ratio
LESYH16/AC Servo Motor

Pushing force set value [%]	Duty ratio [%]	Continuous pushing time [min]
75 or less	100	—
90	60	1.5

∗ [Pushing force set value] is one of the data input to the driver.
∗ [Continuous pushing time] is the time that the actuator can continuously keep pushing.

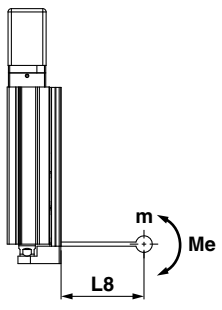


Step 3 Check the duty ratio.

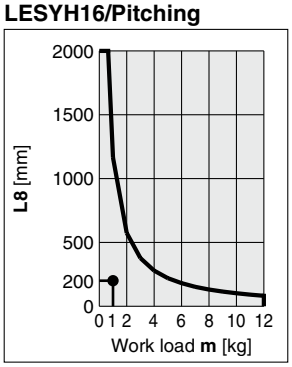
Confirm the allowable duty ratio based on the torque limit/command value while referencing the allowable duty ratio.
Selection example based on the allowable duty ratio)
● Torque limit/Command value: 81 [%]
The allowable duty ratio can be found to be 60 [%].
Calculate the duty ratio for the operating conditions, and confirm it does not exceed the allowable duty ratio.
Selection example) ● Pushing time + Operation (A): 5 s
● Full cycle time (B): 10 s
The duty ratio can be found to be 5/10 x 100 = 50 [%], and this is within the allowable range.

Step 4 Check the allowable moment.
<Static allowable moment> (page 4)
<Dynamic allowable moment> (pages 6, 7)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□B-100 should be selected.

Speed–Work Load Graph/Required Conditions for the Regenerative Resistor (Guide)

Model Selection 1

Selection Procedure

Positioning Control Selection Procedure

Step 1 Check the work load–speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

The model selection method shown below corresponds to SMC's standard motor. For use in combination with a motor from a different manufacturer, check the available product information of the motor to be used.

Step 1 **Check the work load–speed. <Speed–Work load graph>** (page 21)

Select a model based on the workpiece mass and speed while referencing the speed–work load graph.

Selection example) The **LESYH16□B-50** can be temporarily selected as a possible candidate based on the graph shown on the right side.

∗ Refer to the selection method of motor manufacturers for regeneration resistance.

Step 2 **Check the cycle time.**

Calculate **the cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$T = T1 + T2 + T3 + T4$ [s]

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

  $T1 = V/a1$ [s] $T3 = V/a2$ [s]

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load, and in position of the step data. Therefore, calculate the settling time while referencing the following value.

  $T4 = 0.15$ [s]

Calculation example)
T1 to T4 can be calculated as follows.

$T1 = V/a1 = 200/3000 = 0.07$ [s],

$T3 = V/a2 = 200/3000 = 0.07$ [s]

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 200 \cdot (0.07 + 0.07)}{200}$$

$= 0.18$ [s]

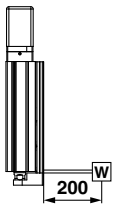
$T4 = 0.15$ [s]

The cycle time can be found as follows.

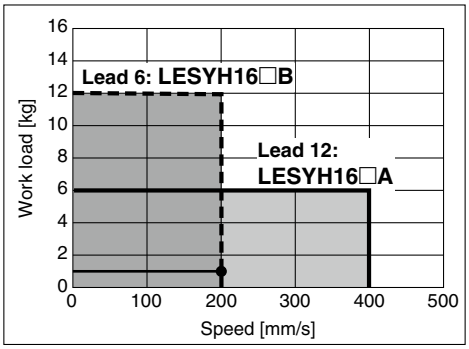
$T = T1 + T2 + T3 + T4$
$= 0.07 + 0.18 + 0.07 + 0.15$
$=$ **0.47 [s]**

Operating conditions

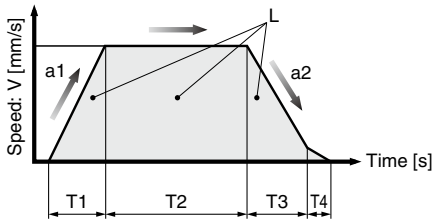
- Workpiece mass: 1 [kg]
- Speed: 200 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 3000 [mm/s²]
- Cycle time: 0.5 s
- Workpiece mounting condition:



LESYH16□□/AC Servo Motor Vertical



<Speed–Work load graph>

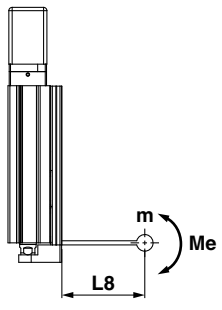


L : Stroke [mm] ····· (Operating condition)
V : Speed [mm/s] ····· (Operating condition)
a1: Acceleration [mm/s²] ··· (Operating condition)
a2: Deceleration [mm/s²] ··· (Operating condition)

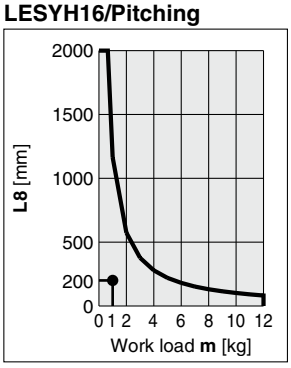
T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Step 3 **Check the allowable moment.**
<Static allowable moment> (page 21)
<Dynamic allowable moment> (pages 22, 23)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□N□B-50 should be selected.

SMC

Selection Procedure

Force Control Selection Procedure

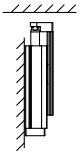
Step 1 Check the required force. → **Step 2** Check the pushing force. → **Step 3** Check the allowable moment.

Selection Example

The model selection method shown below corresponds to SMC's standard motor.
For use in combination with a motor from a different manufacturer, check the available product information of the motor to be used.

Operating conditions

- Pushing force: 210 N
- Workpiece mass: 1 kg
- Speed: 100 mm/s
- Stroke: 100 mm
- Mounting position: Vertical upward
- Pushing time + Operation (A): 5 s
- Full cycle time (B): 10 s



Step 1 **Check the required force.**

Calculate the approximate required force for a pushing operation.
Selection example) ● Pushing force: 210 [N]
● Workpiece mass: 1 [kg]
The approximate required force can be found to be 210 + 10 = 220 [N].
Select a model based on the approximate required force while referencing the specifications (page 43).
Selection example based on the specifications)
● Approximate required force: 220 [N]
● Speed: 100 [mm/s]
The **LESYH16□B** can be temporarily selected as a possible candidate.
Then, calculate the required force for a pushing operation.
If the mounting position is vertical upward, add the actuator table weight.
Selection example based on the table weight)
● **LESYH16□B** table weight: 0.7 [kg]
The required force can be found to be 220 + 7 = 227 [N].

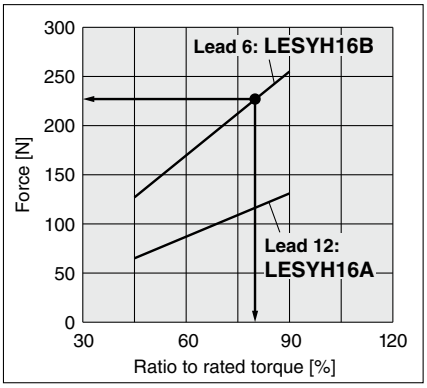
Table Weight Unit [kg]

Model	Stroke [mm]		
	50	100	150
LESYH16	0.4	0.7	—
LESYH25	0.9	1.3	1.7

∗ If the mounting position is vertical upward, add the table weight.

Step 2 **Check the pushing force. <Force conversion graph>**

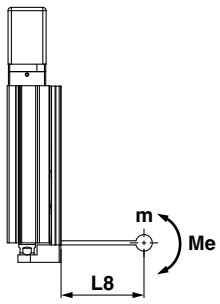
Select a model based on the ratio to rated torque and force while referencing the force conversion graph.
Selection example)
Based on the graph shown on the right side,
● Ratio to rated torque: 80 [%]
● Force: 227 [N]
The **LESYH16B** can be temporarily selected as a possible candidate.



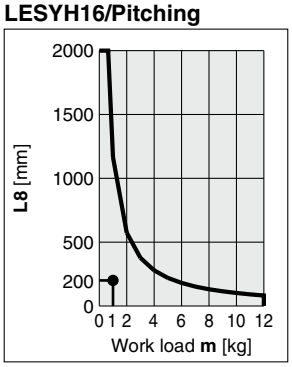
<Force conversion graph>

Step 3 **Check the allowable moment.**
<Static allowable moment> (page 21)
<Dynamic allowable moment> (pages 22, 23)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.



LESYH16/Pitching



<Dynamic allowable moment>

Based on the above calculation result, the LESYH16□N□B-100 should be selected.

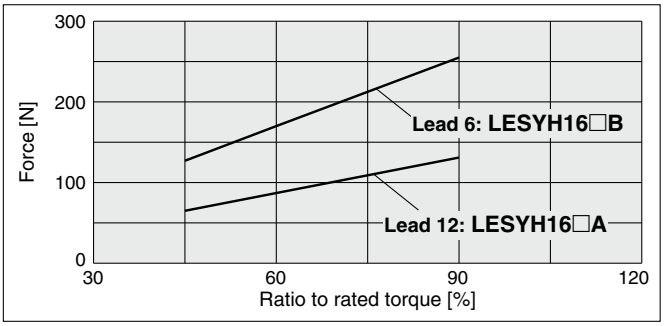
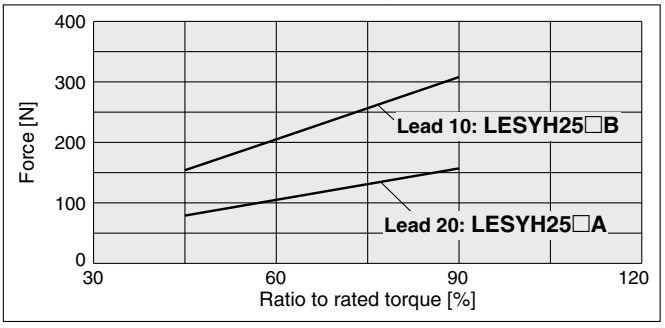
Force Conversion Graph (Guide)

∗ These graphs show an example of when the standard motor is mounted. Calculate the force based on used motor and driver.

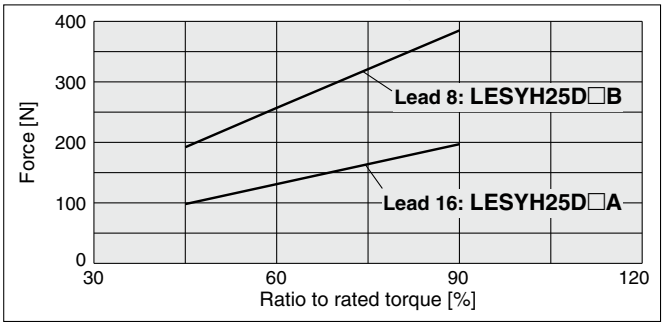
LESYH16□ (Motor mounting position: Parallel/In-line)



LESYH25□ (Motor mounting position: Parallel)



LESYH25D□ (Motor mounting position: In-line)



∗ When using the force control or speed control, set the max. value to be no more than 90% of the rated torque.

Static Allowable Moment

Model	LESYH16		LESYH25		
Stroke [mm]	50	100	50	100	150
Pitching [N·m]	26	43	77	112	155
Yawing [N·m]					
Rolling [N·m]	48		146	177	152

Dynamic Allowable Moment

* This graph shows the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation.

Acceleration/Deceleration —— 5000 mm/s²

Orientation	Load overhanging direction **m**: Work load [kg] **Me**: Allowable moment [N·m] **L**: Overhang to the work load center of gravity [mm]		Model: LESYH16	Model: LESYH25
Horizontal/Bottom		X				Y				Z		Horizontal (Wall)		X				Y				Z		
Dynamic Allowable Moment

∗ This graph shows the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation

Acceleration/Deceleration —— 5000 mm/s²

Orientation	Load overhanging direction **m**: Work load [kg] **Me**: Allowable moment [N·m] **L**: Overhang to the work load center of gravity [mm]		Model: LESYH16	Model: LESYH25
Vertical		Y				Z		
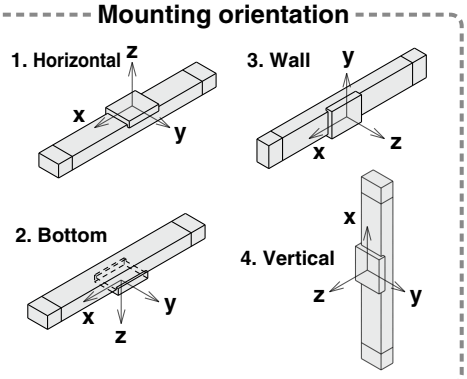
Calculation of Guide Load Factor

1. Decide operating conditions.
   Model: LESYH
   Size: 16
   Mounting orientation: Horizontal/Bottom/Wall/Vertical
   Acceleration [mm/s²]: **a**
   Work load [kg]: **m**
   Work load center position [mm]: **Xc/Yc/Zc**
2. Select the target graph while referencing the model, size, and mounting orientation.
3. Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.
4. Calculate the load factor for each direction.
   α**x = Xc/Lx**, α**y = Yc/Ly**, α**z = Zc/Lz**
5. Confirm the total of α**x**, α**y**, and α**z** is 1 or less.
   α**x + αy + αz ≤ 1**
   When 1 is exceeded, consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation



Example

1. Operating conditions
   Model: LESYH
   Size: 16
   Mounting orientation: Horizontal
   Acceleration [mm/s²]: 5000
   Work load [kg]: 4.0
   Work load center position [mm]: **Xc = 80**, **Yc = 50**, **Zc = 60**
2. Select three graphs from the top of the first row on page 22.
3. **Lx = 250 mm**, **Ly = 160 mm**, **Lz = 700 mm**
4. The load factor for each direction can be found as follows.
   α**x = 80/250 = 0.32**
   α**y = 50/160 = 0.32**
   α**z = 60/700 = 0.09**
5. α**x + αy + αz = 0.73 ≤ 1**

⚠Caution

[CE-compliant products]
EMC compliance was tested by combining the electric actuator LES series and the controller JXC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

[Precautions relating to differences in controller versions]
When the JXC series is to be used in combination with the battery-less absolute encoder, use a controller that is version V3.4 or S3.4 or higher. For details, refer to the **Web Catalog**.

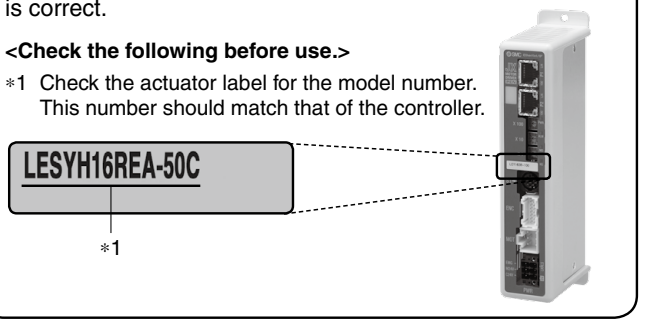
[UL-compliant products]
The JXC series controllers used in combination with electric actuators are UL certified.

The actuator and controller are sold as a package.

Confirm that the combination of the controller and actuator is correct.

<Check the following before use.>

∗1 Check the actuator label for the model number. This number should match that of the controller.



∗ Refer to the Operation Manual for using the products. Please download it via our website.

*1 The force setting range (set values for the driver) for the force control with the torque control mode. Set it while referencing the "Force Conversion Graph" on page 12.
When the control equivalent to the pushing operation of the LECP6 series controller is performed, select the LECSS-T or LECSB2-T driver.
The point table no. input method is used for the LECSB2-T.
When selecting the LECSS2-T, combine it with a Simple Motion module (manufactured by Mitsubishi Electric Corporation) which has a pushing operation function.
*2 The allowable collision speed for collision with the workpiece with the torque control mode
*3 A reference value for correcting errors in reciprocal operation
*4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
*5 The power consumption (including the driver) is for when the actuator is operating.
*6 The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
*7 The max. instantaneous power consumption (including the driver) is for when the actuator is operating.
*8 Only when motor option "With lock" is selected
*9 For an actuator with lock, add the power consumption for the lock.
*10 The resolution will change depending on the driver type.

Specifications

Model			LESYH16		LESYH25 (Parallel)		LESYH25 (In-line)	
Actuator specifications	Stroke [mm]		50, 100		50, 100, 150			
	Work load [kg]	Horizontal*1	8		12		12	
		Vertical	6	12	10	20	10	20
	Force [N]*2 (Set value: Rated torque 45 to 90%)		65 to 131	127 to 255	79 to 157	154 to 308	98 to 197	192 to 385
	Max. speed [mm/s]		400	200	400	200	400	200
	Pushing speed [mm/s]*3		35 or less		30 or less			
	Max. acceleration/deceleration [mm/s²]		5000					
	Positioning repeatability [mm]		±0.01					
	Lost motion [mm]*4		0.1 or less					
	Ball screw specifications	Thread size [mm]	ø10		ø12			
		Lead [mm] (including pulley ratio)	12	6	16 (20)	8 (10)	16	8
		Shaft length [mm]	Stroke + 93.5		Stroke + 104.5			
	Impact/Vibration resistance [m/s²]*5		50/20					
	Actuation type		Ball screw + Belt (Parallel) Ball screw (In-line)		Ball screw + Belt [Pulley ratio 1.25:1]		Ball screw	
	Guide type		Linear guide (Circulating type)					
	Operating temperature range [°C]		5 to 40					
	Operating humidity range [%RH]		90 or less (No condensation)					
Other specifications*6	Actuation unit weight [kg]	50 st	0.585		1.21			
		100 st	0.919		1.68			
		150 st	—		2.19			
	Other inertia [kg·cm²]		0.012 (LESYH16) 0.015 (LESYH16D)		0.035 (LESYH25) 0.061 (LESYH25D)			
	Friction coefficient		0.05					
	Mechanical efficiency		0.8					
Reference motor specifications	Motor shape		□40		□60			
	Motor type		AC servo motor					
	Rated output capacity [W]		100		200			
	Rated torque [N·m]		0.32		0.64			
	Rated rotation [rpm]		3000					

*1 This is the max. value of the horizontal work load. An external guide is necessary to support the load (Friction coefficient of guide: 0.1 or less). The actual work load changes according to the condition of the external guide. Confirm the load using the actual device.
*2 The force setting range for the force control (Speed control mode, Torque control mode)
The force changes according to the set value. Set it with reference to the "Force Conversion Graph (Guide)" on page 21.
*3 The allowable collision speed for collision with the workpiece
*4 A reference value for correcting errors in reciprocal operation
*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
*6 Each value is only to be used as a guide to select a motor of the appropriate capacity.

Weight

- The motor and motor mounting screws should be provided by the customer.
- Motor shaft type should be cylindrical for the NZ, NY, NW, NM2 motor types, and D-cut type for the NM1 and NM3 motor type.
- When mounting a pulley, remove all oil content, dust, and dirt adhered to the shaft and the inside of the pulley.
- Take measures to prevent the loosening of the motor mounting screws and hexagon socket head set screws.

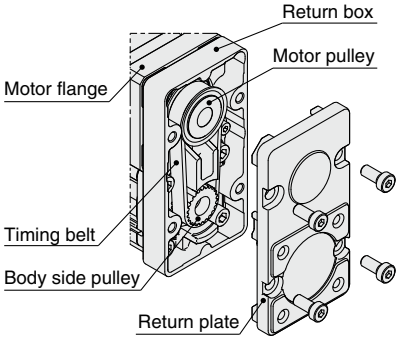
Motor Mounting Diagram

Mounting procedure

1) Secure the motor pulley to the motor (provided by the customer) with the MM1 hexagon socket head cap screw or hexagon socket head set screw.
2) Secure the motor to the motor flange with the motor mounting screws (provided by the customer).
3) Put the timing belt on the motor pulley and body side pulley, and then secure it temporarily with the MM2 hexagon socket head cap screws. (Refer to the mounting diagram.)
4) Apply the belt tension and tighten the timing belt with the MM2 hexagon socket head cap screws. (The reference level is the elimination of the belt deflection.)
5) Secure the return plate with the MM3 hexagon socket head cap screws.



Included Parts List

Size: 16, 25

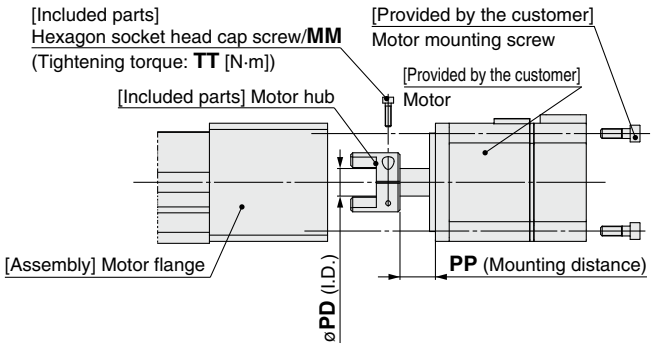
- The motor and motor mounting screws should be provided by the customer.
- Motor shaft type should be cylindrical for the NZ, NY, NX, NW, NM2 motor types, and D-cut type for the NM1 motor type.
- When mounting a hub, remove all oil content, dust, and dirt adhered to the shaft and the inside of the hub.
- Take measures to prevent the loosening of the motor mounting screws and hexagon socket head set screws.

Motor Mounting: In-line

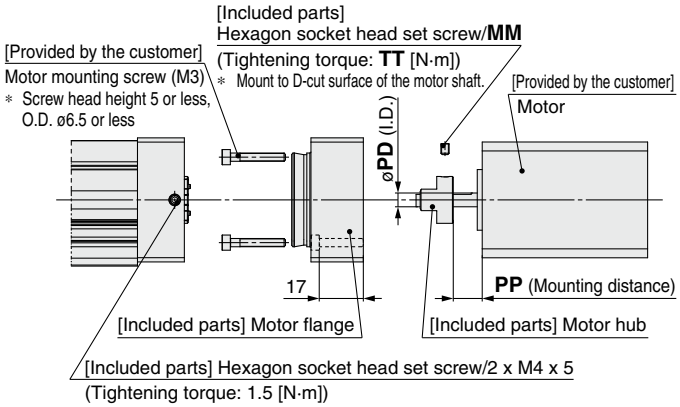
LESYH$^{16}_{25}$D



Mounting procedure

1) Secure the motor hub to the motor (provided by the customer) with the MM hexagon socket head cap screw.
2) Check the motor hub position, and then insert it. (Refer to the mounting diagram.)
3) Secure the motor to the motor flange with the motor mounting screws (provided by the customer).

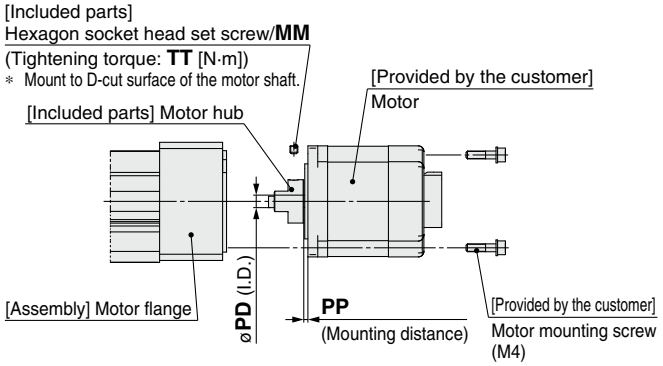
LESYH16D: NM1



Mounting procedure

1) Secure the motor hub to the motor (provided by the customer) with the M3 x 4 hexagon socket head set screw.
2) Secure the motor to the motor flange with the motor mounting screws (provided by the customer).
3) Check the motor hub position, and then insert it. (Refer to the mounting diagram.)
4) Secure the motor flange with the M4 x 5 hexagon socket head set screws.

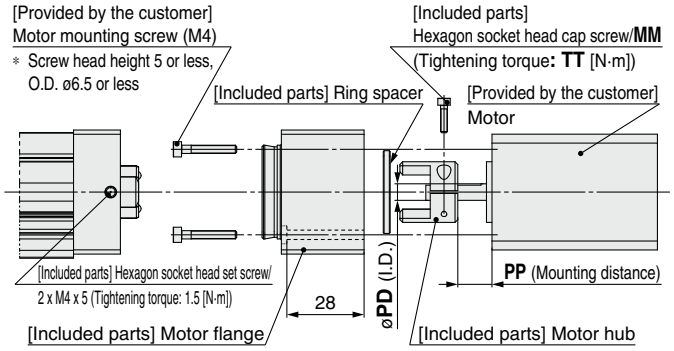
LESYH25D: NM1



Mounting procedure

1) Secure the motor hub to the motor (provided by the customer) with the MM hexagon socket head set screw.
2) Check the motor hub position, and then insert it. (Refer to the mounting diagram.)
3) Secure the motor to the motor block with the motor mounting screws (provided by the customer).

LESYH16D: NM2



Mounting procedure

1) Insert the ring spacer into the motor (provided by the customer).
2) Secure the motor hub to the motor (provided by the customer) with the M2.5 x 10 hexagon socket head cap screw.
3) Secure the motor to the motor flange with the motor mounting screws (provided by the customer).
4) Check the motor hub position, and then insert it. (Refer to the mounting diagram.)
5) Secure the motor flange with the M4 x 5 hexagon socket head set screws.

Dimensions: Motor Flange Option

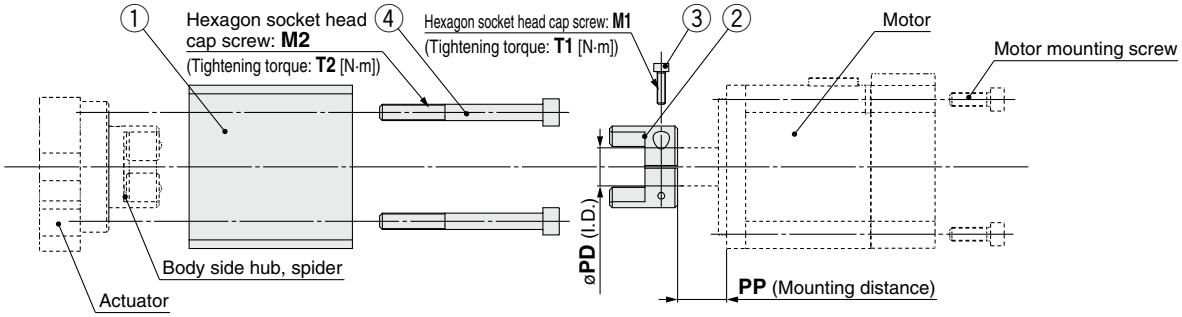
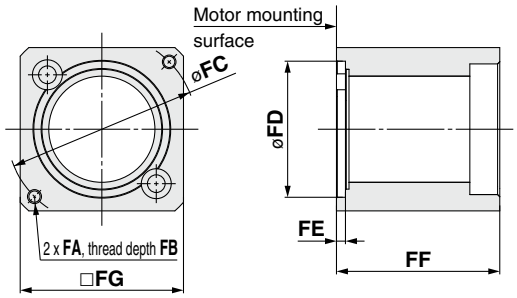
Motor mounting position: In-line



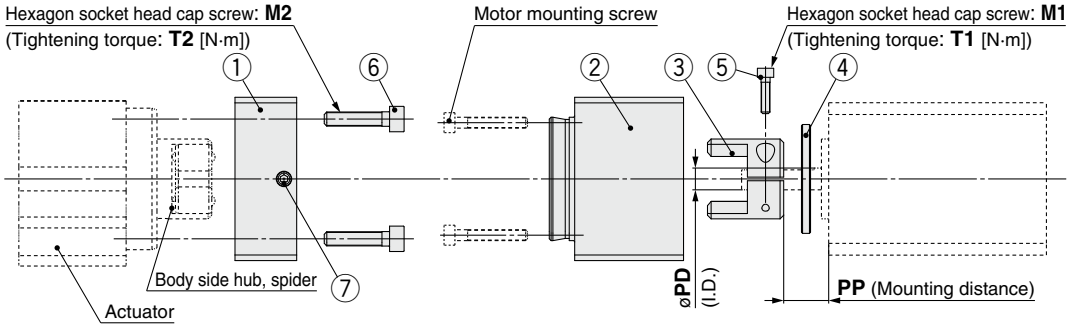
Motor flange details



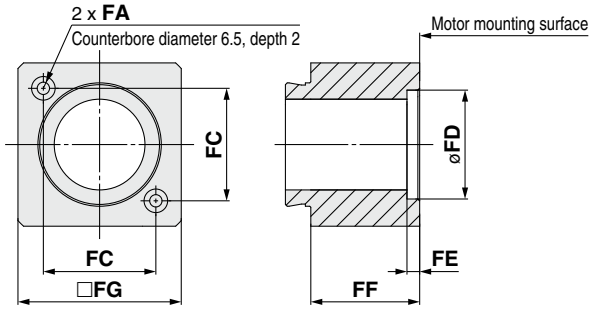
Component Parts

No.	Description	Quantity
1	**Motor flange**	1
2	**Motor hub**	1
3	**Hexagon socket head cap screw (to secure the hub)**	1
4	**Hexagon socket head cap screw (to mount the motor block)**	2

Size: 25, Motor type: NM2



Motor flange B details



Component Parts

No.	Description	Quantity
1	**Motor flange A**	1
2	**Motor flange B**	1
3	**Motor hub**	1
4	**Ring spacer**	1
5	**Hexagon socket head cap screw (to secure the hub)**	1
6	**Hexagon socket head cap screw (to mount the motor flange A)**	2
7	**Hexagon socket head set screw (to secure the motor flange B)**	2
