## 3-color/2-screen display

Main screen

Instantaneous flow rate\*1

Sub screen\*3

Set value	P 8.0
Accumulated value	18400
Peak/Bottom value	H, 16.0
Line name	SMC_PF
Fluid temperature*2	c 25

\*1 Main screen shows the instantaneous flow rate only. \*2 Fluid temperature can be displayed only when the digital flow switch with a temperature sensor is selected.  
 \*3 Sub screen can be turned off. Mode display can be selected for IO-Link compatible type.

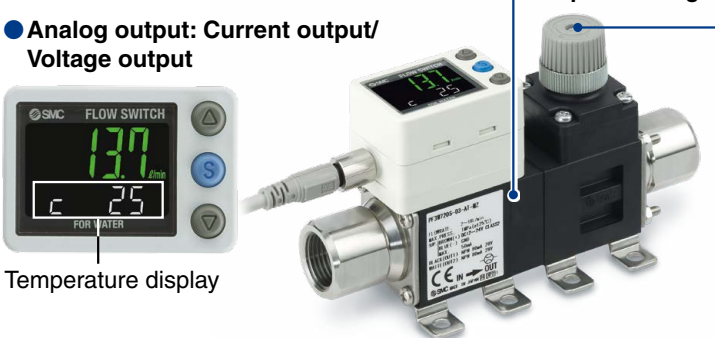

### Compatible with the temperature sensor & flow adjustment valve

Temperature sensor

Flow adjustment valve

- Display range: **-10 to 110°C**  
(Temperature sensor alone)
- Smallest settable increment: **1°C**
- Analog output: Current output/  
Voltage output

- Reduced piping labor
- Space saving

Temperature display

### New Compatible with the analog 2-output type (flow rate + temperature)

Enables the monitoring of flow rate and temperature conditions not only at the installation site but also remotely

### Fluid temperature: 0 to 90°C

### Ethylene glycol aqueous solution can be used.

Example) Flow control of the circulating fluid in a chiller

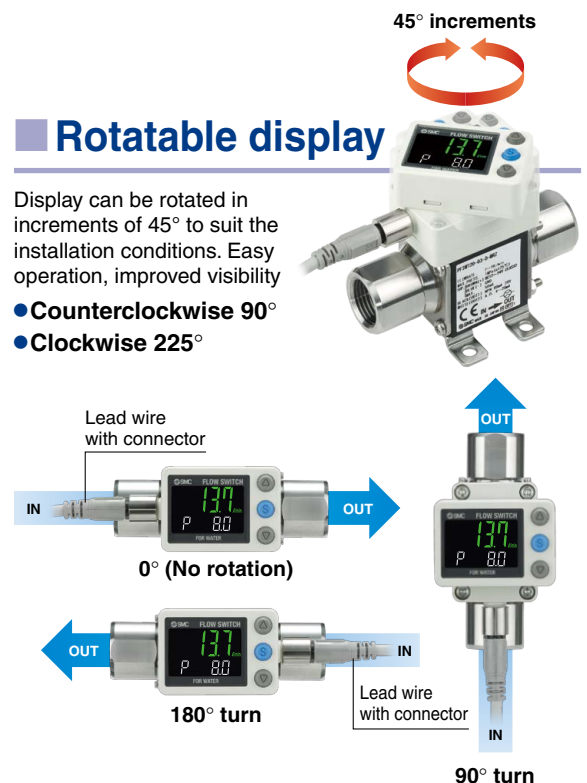

### Non-grease

### Rotatable display

Display can be rotated in increments of 45° to suit the installation conditions. Easy operation, improved visibility

- Counterclockwise 90°
- Clockwise 225°

45° increments

0° (No rotation)

180° turn

90° turn

## Remote Sensor Unit & 3-Color Display Digital Flow Monitor

### Indicator

Visually check the status of the sensor via the indicator.

### Set value copy function

- Reduced setting labor
- Minimized risk of setting mistakes

The set value can be copied to up to 10 flow monitors simultaneously.

### Connector reduces wiring labor.

# Easy Screen Switching

It is possible to change the settings while checking the measured value.

- Main screen**: Measured value (Current flow value)
- Sub screen/Left side**: Label (Display item)
- Sub screen/Right side**: Set value (Threshold value)
- Easy to press convex rubber button**: Improved operability

The sub screen can be switched by pressing the down buttons.

\* One additional arbitrary display mode can be added via the function settings.

- CH display
- Other channel
- Customer defined label
- Display OFF

# Simple 3-Step Setting

After selecting the channel, when the SET button is pressed and the set value (P<sub>1</sub>) is displayed, the set value (threshold value) can be set.

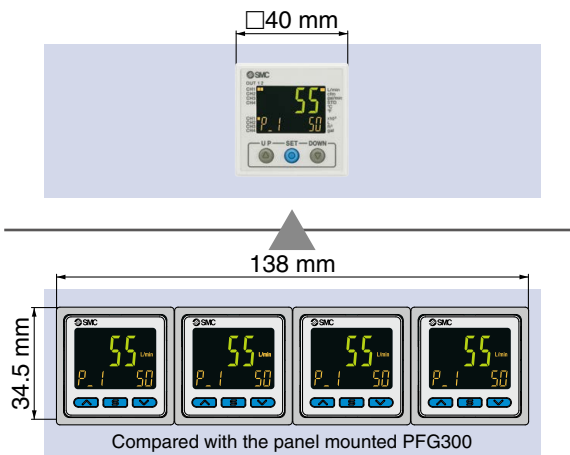

When the SET button is pressed and the hysteresis (H<sub>1</sub>) is being displayed, the hysteresis value can be set.

Now with a snap shot function for set value reading

**Snap shot function**: Pressing the **▲** and **▼** buttons simultaneously for a minimum of 1 second will make the set value (threshold value) the same as the current pressure value.

## Centralized Control Saves Installation Space.

**66% reduction in installation space** (Compared with the panel mounted PFG200□)

## Accumulated Flow Measurement

A single product can manage the accumulated flow in four lines.

## Input Range Selection (for Pressure/Flow rate)

The sensor input range can be set to the required value and displayed. (Voltage input: 1 to 5 V)  
Pressure switch/Flow switch can be displayed.

**A is displayed for 1 V. B is displayed for 5 V.**

The range can be set as required.

Refer to page 32 for the specification of the sensors which can be connected.

For the individual specifications of each connectable sensor, refer to the **Web Catalog**.

### ■ For Pressure Sensor for General Fluids / PSE56□

	A	B
PSE560	0.000	1.000
PSE561	0	-101
PSE562	0	101
PSE563	-101	101

Set A and B to the values shown in the table.

## Connectors

Connection and removal of wiring is easy.

## Functions

### ■ Peak/Bottom value indication function

This function constantly detects and updates the max. (min.) flow when the power is supplied, and allows to hold the max. (min.) flow value.

### ■ Key-lock function

This function prevents operation errors such as accidentally changing setting values.

### ■ External input function

The accumulated value, peak value, and bottom value can be reset remotely.

### ■ Error display function

This function displays error location and content when a problem or error has occurred.

### ■ Delay time setting

The time from when the instantaneous flow reaches the set value to when the switch output operates can be set.

### ■ Zero-cut setting

When the flow display value is close to zero, this function forces the display to zero.

### ■ Selection of power-saving mode

Power-saving mode can be selected. It shifts to power-saving mode automatically when there is no button operation for 30 seconds.

### ■ Setting of security code

Users can select whether a security code must be entered to release the key lock.

### ■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned OFF.

### ■ Snap shot function

The current flow rate value can be stored to the switch output ON/OFF set point.

### ■ Output check function

It is possible to check the switch output operation and process data value.

### ■ Channel to channel copy function

The set values can be copied to other channel.

### ■ Channel select function

Flow value for the selected channel is displayed.

### ■ Channel scan function

Flow values for each channel are displayed in turn every 2 seconds.

# Hub Function

## Converts analog signals to digital signals and supports IO-Link

A currently used sensor can be used.

\* Supports analog voltage output 1-5 V

# IO-Link Compatible

## Supports the IO-Link communication protocol

### Configuration File (IODD File\*1)

- Manufacturer • Product part no. • Set value

\*1 IODD File:  
IODD is an abbreviation of IO Device Description. This file is necessary for setting the device and connecting it to a master. Save the IODD file on the PC to be used to set the device prior to use.

IO-Link is an open communication interface technology between the sensor/actuator and the I/O terminal that is an international standard, IEC61131-9.

IO-Link Compatible Device: Digital Flow Switch for Water

Device settings can be set by the master.

- Threshold value
- Operation mode, etc.

### Read the device data.

- Switch ON/OFF signal and analog value
- Device information: Manufacturer, Product part number, Serial number, etc.
- Normal or abnormal device status
- Cable breakage

## Implement diagnostic bits in the process data.

The diagnostic bit in the cyclic process data makes it easy to find problems with the equipment. It is possible to find problems with the equipment in real time using the cyclic (cycle) data and to monitor such problems in detail with the noncyclic (aperiodic) data.

### Application Examples

#### For the predictive maintenance of cooling water problems

Monitors flow rate and temperature's "switch ON/OFF signals" and "analog values" to determine the cooling status. The process and cooling status can be compared.

## Display function

Displays the output communication status and indicates the presence of communication data

- \*1 Refer to the "Measurable Range for Ethylene Glycol Aqueous Solution" graph on page 19. Measurement is possible as long as the fluid does not corrode the wetted parts and the viscosity is 3 mPa·s (3 cP) or less. Be aware that water leakage may occur due to internal seal shrinkage or swelling depending on the type of fluid.
- \*2 If 0.5 s is selected for the response time of the switch output, the repeatability will be ±3% F.S.
- \*3 The operating pressure range, proof pressure, and available flow range vary depending on the fluid temperature. Refer to the graphs on pages 17 and 19.
- \*4 It is cleared when the power supply is turned OFF. The hold function can be selected. (Intervals of 2 or 5 mins can be selected.)  
If the 5-min interval is selected, the life of the memory element (electronic parts) is limited to 1 million times. (If energized for 24 hours, life is calculated as 5 mins x 1 million = 5 million mins = about 9.5 years.) Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.
- \*5 The response time when the set value is 90% in relation to the step input (The response time is 7 s when it is output by the temperature sensor.)
- \*6 The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is analog output by the temperature sensor.)
- \*7 When the temperature sensor is used, it will be 250 VAC.
- \*8 For details, refer to the "Wetted Parts Construction" on page 19.
- \*9 When the piping diameter or piping passage is restricted, the specifications may not be satisfied.
- \* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

## Temperature Sensor Specifications

Rated temperature range	0 to 100°C*1
Set/Display temperature range	-10 to 110°C
Smallest settable increment	1°C
Display unit	°C
Display accuracy	±2°C
Analog output accuracy	±3% F.S.
Response time	7 s*2
Ambient temperature characteristics	±5% F.S.

\*1 The rated temperature range refers solely to that of the temperature sensor. The fluid temperature range specification of the flow switch as a whole is 0 to 90°C.

\*2 The response time refers solely to that of the temperature sensor.

The output related to the temperature sensor is OUT2 only.

OUT2 can output either the temperature or flow rate by button operation.

## Specifications (Remote Sensor Unit)

Model	PF3W504	PF3W520	PF3W540	PF3W511	
Applicable fluid	Water and Ethylene glycol aqueous solution (with a viscosity of 3 mPa·s [3 cP] or less)*1				
Detection method	Karman vortex				
Rated flow range	0.5 to 4 L/min	2 to 16 L/min	5 to 40 L/min	10 to 100 L/min	
Fluid temperature	0 to 90°C (No freezing or condensation)				
Accuracy	±3% F.S.				
Repeatability	±2% F.S.				
Temperature characteristics	±5% F.S. (25°C standard)				
Operating pressure range*2	0 to 1 MPa*2				
Proof pressure*2	1.5 MPa				
Pressure loss (without flow adjustment valve)	45 kPa or less at the max. flow				
Analog output	Response time*3	1 s			
	Voltage output	Voltage output: 1 to 5 V Output impedance: 1 kΩ			
	Current output	Output current: 4 to 20 mA Max. load impedance: 300 Ω for 12 VDC, 600 Ω for 24 VDC			
Indicator light	For power supply status, flow rate indicator (Blinking speed changes in response to flow rate.), and other error indicator				
Power supply voltage	12 to 24 VDC ±10%				
Current consumption	30 mA or less				
Environmental resistance	Enclosure	IP65			
	Operating temperature range	0 to 50°C (No freezing or condensation)			
	Operating humidity range	Operation, Storage: 35 to 85% R.H. (No condensation)			
	Withstand voltage*4	1000 VAC for 1 min between terminals and housing

	With lead wire with connector	+85 g			

\*1 Refer to the "Measurable Range for Ethylene Glycol Aqueous Solution" graph on page 19. Measurement is possible as long as the fluid does not corrode the wetted parts and the viscosity is 3 mPa·s (3 cP) or less. Be aware that water leakage may occur due to internal seal shrinkage or swelling depending on the type of fluid.

\*2 The operating pressure range and proof pressure may change according to the fluid temperature. Refer to the graphs on page 17.

\*3 The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is analog output by the temperature sensor.)

\*4 When the temperature sensor is used, it will be 250 VAC.

\*5 For details, refer to the "Wetted Parts Construction" on page 19.

\*6 When the piping diameter or piping passage is restricted, the specifications may not be satisfied.

\* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

## Temperature Sensor Specifications

Rated temperature range	0 to 100°C*1
Analog output accuracy	±3% F.S.
Response time	7 s*2
Ambient temperature characteristics	±5% F.S.

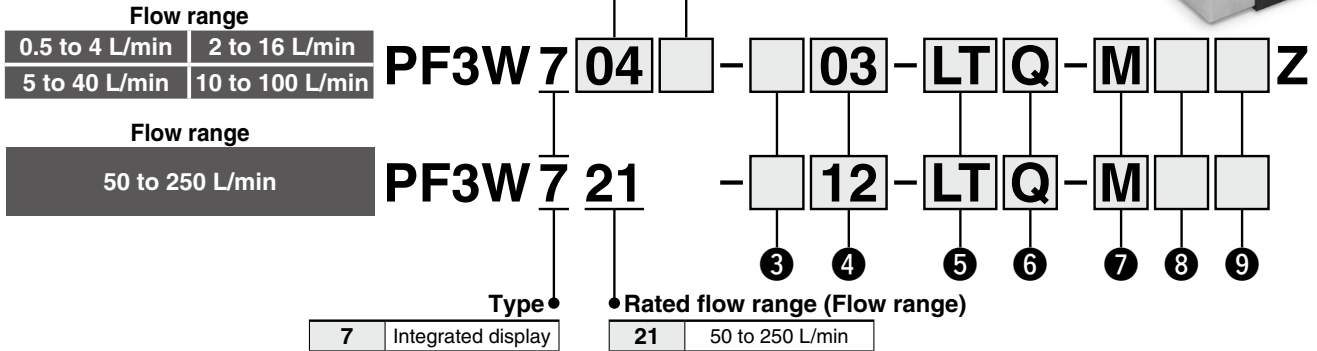

\*1 The rated temperature range refers solely to that of the temperature sensor. The fluid temperature range specification of the flow switch as a whole is 0 to 90°C.

\*2 The response time refers solely to that of the temperature sensor.

Standards and regulations		CE/UKCA marking, UL (CSA)				

\*1 It is cleared when the power supply is turned OFF.

The hold function can be selected. If the 5-min interval is selected, the life of the memory element (electronic parts) is limited to 3.7 million times. (If energized for 24 hours, life is calculated as 5 mins x access times (3.7 million) = 18.5 million mins = about 35 years.) Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.

\*2 Does not include the value of the digital filter

\*3 The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is output by the temperature sensor.)

## Set Flow Range and Rated Flow Range

### Caution Set the flow rate within the rated flow range.

The set flow range is the range of flow rate within which setting is possible. The rated flow range is the range within which the sensor specifications (accuracy, etc.) are satisfied. It is possible to set a value outside of the rated flow range if it is within the set flow range. However, the satisfaction of the specifications cannot be guaranteed.

Sensor	Flow range									
	0.5 L/min	2 L/min	5 L/min	20 L/min	40 L/min	100 L/min	140 L/min	250 L/min	350 L/min

\* For the PF3W5 series, the display flow range and set flow range are the same as those of the flow monitor PF3W3 series.

**Straight Piping Length and Accuracy (Reference Value)**

- The smaller the piping size, the more the product is affected by the straight piping length.
- Fluid pressure has almost no affect.
- Low flow rate lessens the effect of the straight piping length.
- Use a straight pipe that is 8 cm or longer in length to satisfy the  $\pm 3\%$  F.S. specification. (11 cm or longer for the 100 L/min type)

- \*1 It is cleared when the power supply is turned OFF. The hold function can be selected. (Intervals of 2 or 5 mins can be selected.)  
If the 5-min interval is selected, the life of the memory element (electronic parts) is limited to 1 million times. (If energized for 24 hours, life is calculated as 5 mins x 1 million = 5 million mins = about 9.5 years.) Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.

## Function Details

### Integrated Display (PF3W7-Z Series) / IO-Link Compatible (PF3W7-L Series)

#### Delay time setting (PF3W7-L series only)

The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.

The total switching time is the switch operation time and the set delay time. (Default setting: 0 s)

0.00 s
0.05 to 0.1 s (increment of 0.01 s)
0.1 to 1.0 s (increment of 0.1 s)
1 to 10 s (increment of 1 s)
20 s
30 s
40 s
50 s
60 s

#### Output operation

The output operation can be selected from the following: Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow rate, output corresponding to accumulated flow, or accumulated pulse output.

\* At the time of shipment from the factory, it is set to hysteresis mode and normal output.

#### Display color

The display color can be selected for each output condition. The selection of the display color provides visual identification of abnormal values.

Green for ON, Red for OFF
Red for ON, Green for OFF
Red all the time
Green all the time

#### Response time (Digital filter)

The response time (digital filter) can be set to suit the application. Setting the response time (digital filter) can reduce chattering of the switch output and flickering of the analog output and the display. The response time indicates when the set value is 90% in relation to the step input.

\* The temperature sensor output is fixed to 7 s.

Response time (Digital filter)	Applicable model

0.5	●	●
1.0 (Default)	●	●
2.0	●	●
5.0	—	●
10.0	—	●
15.0	—	●
20.0	—	●
30.0	—	●

#### External input function (PF3W7-Z series only)

This function can be used only when the optional external input is present. The accumulated flow, peak value, and bottom value can be reset remotely.

**Accumulated value external reset:** A function to reset the accumulated flow value when an external input signal is applied.

In accumulated increment mode, the accumulated value will reset to and increase from zero.

In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.

\* When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory (EEPROM) will be accessed. Take the life time of the memory device into consideration before using this function.

**Peak/Bottom value reset:** Peak and bottom value are reset.

#### Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.

For the analog output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.

For IO-Link compatible PF3W7-L series. Diagnostic bit (error, flow rate, and temperature), process data (PD) flow, and temperature measurement can be checked.

\* Also, an increase or decrease of the flow and temperature will not change the on/off status of the output while the forced output function is activated.

#### Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off.

The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.

The maximum writable limit of the memory device is 1 million times for PF3W7-Z and 3.7 million times for PF3W7-L, which should be taken into consideration.

#### Display

Display layout for PF3W7-Z series and PF3W7-L series is different.

#### Power-saving mode

The display can be turned off to reduce power consumption.

In power-saving mode, only decimal points blink.

If any button is pressed during power-saving mode, the display is recovered for 30 seconds to check the flow, etc.

#### Setting of security code

The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

#### Peak/Bottom value display

The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value display mode, this maximum (minimum) flow rate is displayed.

#### Key-lock function

Prevents operation errors such as accidentally changing setting values

**Integrated Display (PF3W7-Z Series) / IO-Link Compatible (PF3W7-L Series)**

■ **Analog output free range function (PF3W7-Z series only)**

This function allows a flow that generates an output of 5 V or 20 mA to be changed. (This function is not available for the analog output to the temperature.) This function is available if the analog output type is used. The value can be changed between 10% of the maximum value of the rated flow and the maximum value of the display range.

■ **Error display function**

When an error or abnormality arises, the location and contents are displayed.

## Remote Sensor Unit (PF3W5-Z Series)

### ■ POWER indicator function

It is possible to check whether power supply is reaching the product. When power is supplied to the product, the indicator lights up green.

### ■ FLOW indicator function

Status of the flow rate can be checked visually. When the flow rate increases, the green lamp blinks faster. When below the measurable lower limit of flow rate, the lamp turns off, when above the measurable upper limit of flow rate, red lamp turns on.

### ■ Error display function

When an error or abnormality arises, the location and contents are displayed.

## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

 **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

### Warning

#### 1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

#### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

#### 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

#### 4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

### Caution

**We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.**

**Use in non-manufacturing industries is not covered.**

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

### Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

#### Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2)  
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.  
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

\*2) **Vacuum pads are excluded from this 1 year warranty.**

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

#### Revision History

- Edition B**
- \* The PFG200 series 4-channel flow monitor has been added.
  - \* An analog voltage 2-output type (flow rate + temperature) has been added.
  - \* An analog current 2-output type (flow rate + temperature) has been added.
  - \* Number of pages has been increased from 32 to 44.

 **Safety Instructions** Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
