

Magnet Gripper

Adsorbs and Holds with a Magnet

■ **Steel plates can be transferred without a vacuum.**

Supports workpieces with holes and uneven surfaces where a vacuum pad cannot be used.

■ **Holds workpieces even when air is shut off.**

■ **High holding force 80 N** (Workpiece plate thickness: 0.6 mm)
120 N (Workpiece plate thickness: 1.4 mm)

■ **Residual holding force 0.3 N or less** (Reduces workpiece release time)

Workpiece adsorption/holding

Workpiece release

■ **Holding force can be adjusted with a bumper with 3 types of thicknesses.**

Thickness	Holding force
6 mm	80 N
7 mm	50 N
8 mm	30 N

Prevents deformation of workpieces and accidental adsorption of a second piece. Fluororubber with excellent oil resistance is used. Has a contact surface structure which reduces sideslip. Bumper can be replaced without a tool.

■ **Auto switches can be mounted on 4 surfaces.**

Magnetic field resistant auto switch:

D-P3DWA

Small auto switch:

D-M9□V

■ **Mountable on 3 surfaces.**

⚠ Caution

- Since a thin plate is used for the metal surface on the end, damage may occur when an impact load is applied due to contact with a workpiece. Be sure to attach a bumper before use, and check and adjust operation so that no impact load is applied to the metal surface.
- When operating an actuator with a small diameter and a short stroke at a high frequency, dew condensation (water droplets) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube (IDK series) to the actuator will prevent dew condensation from occurring. For details, refer to the IDK series in the **WEB catalog**.
